

Why a right to explanation of automated decision-making does not exist in the General Data Protection Regulation

Abstract

Since approval of the EU General Data Protection Regulation (GDPR) in 2016, it has been widely and repeatedly claimed that a ‘right to explanation’ of decisions made by automated or artificially intelligent algorithmic systems will be legally mandated by the GDPR. This right to explanation is viewed as an ideal mechanism to enhance the accountability and transparency of automated decision-making. However, there are several reasons to doubt both the legal existence and the feasibility of such a right. In contrast to the right to explanation of specific automated decisions claimed elsewhere, the GDPR only mandates that data subjects receive limited information (Articles 13-15) about the logic involved, as well as the significance and the envisaged consequences of automated decision-making systems, what we term a ‘right to be informed’. Further, the ambiguity and limited scope of the ‘right not to be subject to automated decision-making’ contained in Article 22 (from which the alleged ‘right to explanation’ stems) raises questions over the protection actually afforded to data subjects. These problems show that the GDPR lacks precise language as well as explicit and well-defined rights and safeguards against automated decision-making, and therefore runs the risk of being toothless. We propose a number of legislative steps that, if taken, may improve the transparency and accountability of automated decision-making when the GDPR comes into force in 2018.

1 Introduction¹

In recent months, researchers,² government bodies,³ and the media⁴ have claimed that a ‘right to explanation’ of decisions made by automated and artificially intelligent algorithmic systems is legally mandated by the forthcoming EU General Data Protection Regulation⁵ 2016/679 (GDPR). The right to explanation is viewed as a promising mechanism in the broader pursuit by government and industry for accountability and transparency in algorithms, artificial intelligence, robotics, and other automated systems.⁶ Automated systems can have many

unintended and unexpected effects.⁷ Public assessment of the extent and source of these problems is often difficult,⁸ owing to the use of complex and opaque algorithmic mechanisms.⁹ The alleged right to explanation would require data controllers to explain how such mechanisms reach decisions. Significant hype has been mounting over the empowering effects of such a legally enforceable right for data subjects, and the disruption of data intensive industries, which would be forced to explain how complex and perhaps inscrutable automated methods work in practice.

However, there are several reasons to doubt the existence, scope, and feasibility of a ‘right to explanation’ of automated decisions. In this paper, we examine the legal status of the ‘right to explanation’ in the GDPR, and identify several barriers undermining its implementation in any form. We argue that the GDPR does not, in its current form, implement a right to explanation, but rather a limited ‘right to be informed’. Here is a quick overview.

In Section 2, we disentangle the types and timing of explanations that can be offered of automated decision-making. The right to explanation, as popularly proposed, is thought to grant an explanation of specific automated decisions, after such a decision has been made.¹⁰

In Section 3, we assess three possible legal bases for a right to explanation in the GDPR: (1) the right not to be subject to automated decision-making and safeguards enacted thereof (Article 22 and Recital 71); (2) notification duties of data controllers (Articles 13-14 and Recitals 60-62); and (3) the right to access (Article 15 and Recital 63). The aforementioned proposal for a right to explanation¹¹ muddles the first and second legal bases: legally binding requirements of Article 22 and non-binding provisions of Recital 71, with notification duties

¹⁰ This is the type of explanation of automated decision-making imagined in Recital 71 GDPR, which states “In any case, such processing should be subject to suitable safeguards, which should include specific information to the data subject and the right to obtain human intervention, to express his or her point of view, to obtain an explanation of the decision reached after such assessment and to challenge the decision.”

¹¹ Goodman and Flaxman (n 1).

(Articles 13-14) that require data subjects to be provided with information about “the *existence of automated decision-making*, including profiling, referred to in Article 22(1) and (4) and, at least in those cases, meaningful information about the *logic involved*, as well as the *significance* and the *envisaged consequences* of such processing for the data subject” [italics added]. Having challenged the legal basis for a right to explanation proposed by others, we then consider whether the right of access in Article 15 provides a stronger legal basis. Following the 1995 Data Protection Directive (95/46/EC), we argue that the GDPR’s right of access is sufficiently ambiguous to allow for a heavily limited right to explanation of the functionality of automated decision-making systems – what we refer to as the ‘right to be informed’. However, the right of access does not establish a right to explanation of specific automated decisions of the type currently imagined elsewhere in public discourse. Not only is a right to explanation of specific decisions not granted by the GDPR, it also appears to have been intentionally not adopted in the final text of the GDPR after appearing in an earlier draft.

In Section 4, we consider the limitations of scope and applicability, if a right to explanation were to exist. We show that a ‘general’ right to explanation, applicable to all automated decisions, would not exist even if Recital 71 were legally binding. A right to explanation, derived from the right of access (Article 15) or safeguards described in Article 22(3), would only apply to a narrow range of decisions “solely based on automated processing” and with “legal” or “similarly significant” effects for the data subject (Article 22(1) GDPR). We examine the limited cases in which the right would apply, including the impact of a critical ambiguity of language that allows the broader “right not to be subject to automated decision-making” (Article 22 GDPR) to be interpreted either as a prohibition, or right to object.

Section 5 concludes the article with recommendations for a number of legislative steps that, if taken, may improve the transparency and accountability of automated decision-making when the GDPR comes into force in 2018.

2 What is meant by a right to explanation?

Before examining whether the GDPR specifies a right to explanation, it is necessary to examine what one may mean by an ‘explanation’ of automated decision-making. Two kinds of explanations may be in question, depending on whether one refers to:

- *system functionality*, that is, the logic, significance, envisaged consequences and general functionality of an automated decision-making system, e.g. the system’s requirements specification, decision trees, classification structures; or to

- *specific decisions*, that is, the logic or rationale, reasons, and individual circumstances of a specific automated decision, e.g. the weighting of features, machine-defined case-specific decision rules, information about reference or profile groups.¹²

Furthermore, one can also distinguish between explanations in terms of their timing in relation to the decision-making process:

- an *ex ante* explanation occurs prior to an automated decision-making taking place. Note that an *ex ante* explanation can logically address only *system functionality*, as the rationale of a decision cannot be known before the decision is made;
- an *ex post* explanation occurs after an automated decision has taken place. Note that an *ex post* explanation can address both *system functionality* and the rationale of a *specific decision*.

An example may help clarify how these distinctions interact. Take an automated credit scoring system. Prior to a decision being made (*ex ante*), the system provider can inform the data subject about the *system functionality*, including the general logic (types of data and features considered, categories in the decision tree), purpose or significance (to assign a credit score), and envisaged consequences (the credit score can be used by lenders to assess credit worthiness, affecting the terms of credit such as interest rate). After a decision has been made (*ex post*), an explanation of system functionality can still be provided to the data subject. However, the provider can also explain to the data subject the logic and individual circumstances of their *specific decision*, such as their credit score, the data or features that were considered in her particular case, and their weighting within the decision tree or classification structure. In other words, the provider can explain how a particular score was assigned. With that said, the provider's ability to offer an explanation of the rationale of a specific decision may be limited by several legal (see Section 4) and technical factors, including the use of complex probabilistic analytics and decision-making methods.¹³

These distinctions between two kinds and two different timings of explanations are implicit in the GDPR. Their importance will be highlighted as we examine the possible legal bases for a right to explanation.

¹² This is specifically a kind of explanation possible only once a decision has been taken. It refers to a particular decision, not the decision-making method or system itself. This is the type of explanation imagined in Recital 71 GDPR, which calls for “an explanation of the decision reached after such assessment.” The Recital explicitly refers to a singular decision that has been reached.

¹³ Jenna Burrell, ‘How the Machine “Thinks:” Understanding Opacity in Machine Learning Algorithms’ [2016] Big Data & Society.

3 Why there is no ‘right to explanation’ in the GDPR

Three distinct possible legal bases for a right to explanation of automated decision-making can be found in the GDPR. A right to explanation can possibly be derived from:

- 1) safeguards against automated decision-making as required under Article 22(3), and commented upon by Recital 71;
- 2) notification duties under Articles 13-14 commented upon by Recitals 60-62; or
- 3) the right of access under Article 15, and commented upon by Recital 63.

These bases are respectively referred to as a right to explanation derived from (1) safeguards, (2) notification duties, and (3) the right of access. We will assess each in turn. On the whole, the proposal calling for an ex post explanation of specific decisions (at a minimum) that seemingly applies to any instance of automated decision-making is based on a combination of safeguards and notification duties. It combines non-binding Recital 71 with binding provisions of Articles 13-14 and 22 to argue that “The law will [...] effectively create a “right to explanation,” whereby a user can ask for an explanation of an algorithmic decision that was made about them.”¹⁴ This proposal is incorrect for several reasons.

3.1 A right to explanation derived from safeguards against automated decision-making

Starting with the proposal for a right to explanation derived from safeguards, Article 22 (see: Figure 1) and Recital 71 GDPR address a data subject’s right not to be subject to automated decision-making. Article 22(3), which addresses safeguards against automated decision-making, states that

the data controller shall implement *suitable measures to safeguard* the data subject’s rights and freedoms and legitimate interests, at least the *right to obtain human intervention on the part of the controller, to express his or her point of view and to contest the decision* [italics added].

¹⁴ Goodman and Flaxman (n 1). The ‘right to explanation’ is proposed as follows. On p. 1: “The law will also effectively create a “right to explanation,” whereby a user can ask for an explanation of an algorithmic decision that was made about them.” Further, on p. 3: “Paragraph 71 of the recitals (the preamble to the GDPR, which explains the rationale behind it but is not itself law) explicitly requires data controllers to “implement appropriate technical and organizational measures” that “prevents, inter alia, discriminatory effects” on the basis of processing sensitive data.” Further, on p. 6: “The provisions outlined in Articles 13-15 specify that data subjects have the right to access information collected about them, and also requires data processors to ensure data subjects are notified about the data collected. However, it is important to distinguish between these rights, which may be termed the right to access and notification, and additional “safeguards for the rights and freedoms of the data subject” required under Article 22 when profiling takes place. Although the Article does not elaborate what these safeguards are beyond “the right to obtain human intervention”, Articles 13 and 14 state that, when profiling takes place, a data subject has the right to “meaningful information about the logic involved.” This requirement prompts the question: what does it mean, and what is required, to explain an algorithm’s decision?”

Critically, a right to explanation is not mentioned. Rather, after a decision has been made, and assuming the decision meets a condition specified in Article 22(3)a (to enter or fulfil a contract) or Article 22(3)c (with explicit consent), data subjects are granted additional legally binding safeguards to obtain human intervention, express views, or contest a decision (Article 22(3)), but *not* to obtain an explanation of the decision reached.

Figure 1: Article 22 of the General Data Protection Regulation

1. The data subject shall have the right not to be subject to a decision based solely on automated processing, including profiling, which produces legal effects concerning him or her or similarly significantly affects him or her.
2. Paragraph 1 shall not apply if the decision:
 - (a) is necessary for entering into, or performance of, a contract between the data subject and a data controller;
 - (b) is authorised by Union or Member State law to which the controller is subject and which also lays down suitable measures to safeguard the data subject's rights and freedoms and legitimate interests; or
 - (c) is based on the data subject's explicit consent.
3. In the cases referred to in points (a) and (c) of paragraph 2, the data controller shall implement suitable measures to safeguard the data subject's rights and freedoms and legitimate interests, at least the right to obtain human intervention on the part of the controller, to express his or her point of view and to contest the decision.

In all of the GDPR, a right to explanation is only explicitly mentioned in Recital 71, which states that a person that has been subject to automated decision-making

should be subject to suitable safeguards, which should include specific information to the data subject and the right to obtain human intervention, to express his or her point of view, *to obtain an explanation of the decision reached after such assessment* and to challenge the decision [italics added].

If legally binding, this provision would require an *ex post* explanation, as Recital 71 addresses safeguards to be in place once a decision has been reached. However, Article 22(3) makes no mention of an “explanation of the decision reached after such assessment” included in Recital 71, which the aforementioned proposal cites in support of a right to explanation for specific

automated decisions.¹⁵ This omission from Article 22 is critical, as it means the right, unlike the other safeguards specified in Article 22, is not legally binding. Recitals provide guidance on how to interpret the Articles, but are not themselves legally binding, unlike Articles. As Klimas and Vaiciukaite explain, “Recitals have no positive operation of their own” and “cannot cause legitimate expectations to arise.”¹⁶ Therefore, data subjects will not be granted a legally binding *ex post* right to explanation of automated decisions on the basis of legal safeguards in Article 22 as it currently stands.

The omission of a right to explanation from Article 22 would appear to be purposeful, and not a mere matter of fiddling with subtle interpretations (e.g. the meaning of ‘safeguards’ in Article 22(3)). The safeguards specified in Recital 71 (right to human intervention, expression of views, and contestation) are identical to those in Article 22(3), with the only significant difference represented by the further inclusion of a right “to obtain an explanation of the decision reached” in Recital 71. Article 22(3) does not require “specific information to the data subject” or an “explanation of the decision reached after such assessment” as mentioned in Recital 71. The purposeful omission of this text from the legally binding Article 22, which otherwise matches the text in non-binding Recital 71, suggests that legislators did not intend to implement a legally binding right to explanation of specific decisions. What happened?

Looking at previous drafts of the GDPR and commentary from the trilogue negotiations,¹⁷ one can see that legislators had stricter safeguards in place on automated decision-making and profiling, but that these were eventually dropped, including a legally binding right to explanation of specific decisions.¹⁸ An early indication of the debate around the right to explanation can be seen in the November 2013 report of the European Parliament¹⁹

¹⁵ *ibid*; Rossi (n 1).

¹⁶ Tadas Klimas and Jurate Vaiciukaite, ‘The Law of Recitals in European Community Legislation’ (2008) 15 *ILSA Journal of International & Comparative Law* 32–3 <https://papers.ssrn.com/sol3/papers.cfm?abstract_id=1159604> accessed 22 January 2017. The paper discusses in detail the legal status of Recitals in European law.

¹⁷ The ‘trilogue negotiations’ describe a series of meetings in 2015 between the European Commission, Council and Parliament to adopt a final text for the GDPR. For an introduction and discussion of the legal basis of trilogue, see: Oliver Proust, ‘Unravelling the Mysteries of the GDPR Trilogues’ (*Privacy, Security and Information Law*, 2015) <<http://privacylawblog.fieldfisher.com/2015/unravelling-the-mysteries-of-the-gdpr-trilogues/>> accessed 16 December 2016.

¹⁸ Rita Heimes, ‘Top 10 Operational Impacts of the GDPR: Part 5 - Profiling’ <<https://iapp.org/news/a/top-10-operational-impacts-of-the-gdpr-part-5-profiling/>> accessed 10 November 2016: “A hotly contested provision of the GDPR, the “profiling” restrictions ultimately adopted were narrower than initially proposed.”

¹⁹ European Parliament Committee on Civil Liberties, Justice and Home Affairs, ‘Report on the Proposal for a Regulation of the European Parliament and of the Council on the Protection of Individuals with Regard to the

(EP) and December 2014 report of the European Council in response to the original GDPR text proposed by the European Commission²⁰ (EC) in 2012.

The EC's proposed text did not contain a right to explanation. The EP proposed the following amendment to Article 20 (now Article 22 in the adopted version of the GDPR), Paragraph 5:

Profiling which leads to measures producing legal effects concerning the data subject or does similarly significantly affect the interests, rights or freedoms of the concerned data subject shall not be based solely or predominantly on automated processing and shall include human assessment, including an explanation of the decision reached after such an assessment. The suitable measures to safeguard the data subject's legitimate interests referred to in paragraph 2 shall include the right to obtain human assessment and an explanation of the decision reached after such assessment [...]

The EP's preferred text mandated "a right to obtain human assessment and an explanation of the decision reached." These safeguards would have been part of Article 20, meaning that they would have been legally binding. However, the proposed safeguards were not adopted in trilogue. This change suggests that legislators intentionally chose to make the right to explanation non-binding by moving it to Recital 71. The right to explanation now appears only as a voluntary example of measures to safeguard data subjects' interests that data controllers can implement in cases of lawful decision-making, as defined in Article 22(3).

The European Council's 2014 draft,²¹ on the other hand, only required that the data controller shall implement *suitable measures to safeguard* the data subject's rights and freedoms and legitimate interests, such as *the right to obtain human intervention on the part of the controller, to express his or her point of view and to contest the decision* [italics added].

The Council suggested to add the text:

to express his or her point of view, to get an *explanation of the decision reached after such assessment* and the right to contest the decision [italics added],

Processing of Personal Data and on the Free Movement of Such Data (General Data Protection Regulation) - A7-0402/2013' (European Parliament 2013) A7-0402/2013 <<http://www.europarl.europa.eu/sides/getDoc.do?type=REPORT&reference=A7-2013-0402&language=EN>> accessed 10 November 2016.

²⁰ European Commission, 'Regulation of the European Parliament and the Council on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data (General Data Protection Regulation)' (European Commission 2012) 2012/0011 (COD) <http://ec.europa.eu/justice/data-protection/document/review2012/com_2012_11_en.pdf> accessed 10 November 2016.

²¹ European Digital Rights, 'Comparison of the Parliament and Council Text on the General Data Protection Regulation' (European Digital Rights International 2016) 140 <https://edri.org/files/EP_Council_Comparison.pdf> accessed 20 November 2016. This source provides a side-by-side comparison of the aforementioned drafts from the European Parliament (n 17).and European Commission (n 18), as well as amendments to the Commission's text proposed by the European Council.

to Recital 58 (equivalent to Recital 71 GDPR).²² The Council thus suggested to move the legally binding right to explanation added in the EP's draft to a non-binding Recital. This approach was eventually taken in the final text adopted in 2016, meaning a legally binding *ex post* right to explanation cannot be based on safeguards against automated decision-making currently explicitly required by Article 22.

Interestingly, despite years of negotiations, the final wording of the GDPR concerning protections against profiling and automated decision-making hardly changed from the relevant Articles and Recitals of the Data Protection Directive 1995. As with the GDPR, a 'right to explanation' does not appear in Article 15 of the Directive (see Figure 2), which addresses automated individual decisions. Article 22 GDPR has not substantially changed from Article 15 of the Directive, besides the inclusion of explicit consent as a case in which automated decision-making is explicitly allowed (Article 22(2)c).

Figure 2: Article 15 of the 1995 Directive

1. Member States shall grant the right to every person not to be subject to a decision which produces legal effects concerning him or significantly affects him and which is based solely on automated processing of data intended to evaluate certain personal aspects relating to him, such as his performance at work, creditworthiness, reliability, conduct, etc.
2. Subject to the other Articles of this Directive, Member States shall provide that a person may be subjected to a decision of the kind referred to in paragraph 1 if that decision:
 - (a) is taken in the course of the entering into or performance of a contract, provided the request for the entering into or the performance of the contract, lodged by the data subject, has been satisfied or that there are suitable measures to safeguard his legitimate interests, such as arrangements allowing him to put his point of view; or
 - (b) is authorized by a law which also lays down measures to safeguard the data subject's legitimate interests.

²² European Digital Rights (n 19) 40.

3.2 A right to explanation derived from notification duties

Articles 13 and 14 GDPR specify notification duties for data controllers concerning the processing of data collected from the data subject (Article 13) or from a third party (Article 14). In the aforementioned proposal, these Articles are cited as a basis for an *ex post* right to explanation. The argument goes that Article 13(2) and Article 14(2) require data controllers to provide the data subject with the following information necessary to ensure fair and transparent processing.

According to Article 13(2)f and Article 14(2)g, this information includes

the *existence of automated decision-making*, including profiling, referred to in Article 22(1) and (4) and, at least in those cases, meaningful information about the *logic involved*, as well as the *significance* and the *envisaged consequences* of such processing for the data subject [italics added].

This duty applies in cases of automated processing meeting the requirements of Article 22(1) or 22(4) (more on this later).

It has been suggested that the notification duties in Articles 13-14, in combination with the safeguards defined in Article 22(3), grant an *ex post* right to explanation of the “existence of [...] logic involved [...] significance [...] and envisaged consequences” of automated decision-making.²³ This proposal is mistaken for two reasons.

First, only an *ex ante* explanation of *system functionality* is explicitly required by Article 13(2)f and Article 14(2)g. These notification duties precede decision-making. Notification occurs *before* a decision is made, at the point when data is collected for processing. This holds true even if Article 14 introduces some ambiguities when data are collected from third parties rather than data subjects (insofar as the controller needs only to notify the data subject within 30 days of collection). As explained in Section 2, only an explanation of system functionality is logically possible prior to decision-making. Therefore Articles 13-14 cannot be used as evidence of an *ex post* right to explanation of *specific decisions* that can logically only be given once a decision has been made.²⁴

²³ Goodman and Flaxman (n 1).

²⁴ See also Suzanne Rodway, ‘Just How Fair Will Processing Notices Need to Be under the GDPR’ (2016) 16 Privacy & Data Protection 16. Note the paper focused on the EC draft but talks in general about the aim and purpose of notification duties. The author explains that these provisions mainly mean that data controllers have to update their privacy notices. Further: “whether any automated decisions will be made using the data (including for profiling purposes) and, if so, a meaningful explanation about the logic used in those decisions and the possible consequences of those decisions for the data subject. Examples include whether a credit card application might be declined or a job application rejected.” This shows that Articles 13-14 only create a notification duty to inform

Second, the proposal links Article 13(2)f and Article 14(2)g to the safeguards in Article 22(3). This link is not made in the GDPR. Article 13(2)f and Article 14(2)g apply only to Article 22(1) and Article 22(4), which do not address safeguards against automated decision-making. The supposed link – between notification about the logic involved, significance and envisaged consequences of automated decision-making in Articles 13-14, and the *ex post* right to explanation incorrectly attributed to Article 22(3) (which only features in Recital 71) – is therefore untenable and can be dismissed. The proposal also conflates the legally binding notification duties, specified in Articles 13-14, and the non-binding rights, specified in Recital 71. The structure of the GDPR does not support this conflation: an *ex ante* explanation of *system functionality* on the one hand (Articles 13-14), and an *ex post* explanation of a *specific decision* on the other (Recital 71), are purposefully (and correctly) separated, as they would occur before and after a decision has been made, respectively.

It follows that the proposal for an *ex post* right to explanation of *specific decisions*²⁵ confuses the timeline of automated decision-making by combining safeguards – from Article 22(3) and Recital 71 applicable after a decision has been made – with notification requirements concerning the existence of, significance, envisaged consequences and logic involved in automated decision-making in Articles 13-14, before a decision has been made.²⁶ Any suggestion to the contrary fails to distinguish between (1) the legally binding duty to notify the data subject of the logic involved, significance and envisaged consequences of automated decision-making system *before* decision-making occurs (Articles 13-14), and (2) the data subject's non-binding right to an explanation of specific decisions (Recital 71) *after* decision-making occurs.

The language used in Article 13(2)f and Article 14(2)g also supports the interpretation that only an *ex ante* explanation is required. Data controllers must inform the data subject about the

existence of automated decision-making, including profiling [...] [and provide data subjects with] meaningful information about the logic involved,²⁷ as well as the significance and the envisaged consequences of such processing.

about the general usage of automated decision making before a decision has been made, and to inform about the future consequences. Further support for this argument can be found in Recitals 60-62 GDPR.

²⁵ Goodman and Flaxman (n 1).

²⁶ *ibid.*

²⁷ Article 29 Data Protection Working Party, 'Opinion 06/2014 on the Notion of Legitimate Interests of the Data Controller under Article 7 of Directive 95/46/EC' (2014) 844/14/EN WP 217 29

<<http://www.dataprotection.ro/servlet/ViewDocument?id=1086>> accessed 10 November 2016; "As explained on page 46 of the Working Party's Opinion 3/2013 on purpose limitation (cited above in footnote 9), in case of

The language used suggests that data subjects must be provided with information about how an automated decision-making system works in general, for which purposes, and with what predicted impact, *before* automated decisions are made. Notably this cannot include any information about how a specific decision was made or reached, but rather addresses how the system itself functions, e.g. the decision tree or rules, or predictions about how inputs will be processed, and hence only how a specific decision may be reached in the future.

3.3 A right to explanation derived from the right of access

In contrast to prior proposals (see Section 1), it may also be possible to derive a right to explanation from the right of access established in Article 15 GDPR. Article 15(1)h is identical to Article 13(2)f and Article 14(2)h: data subjects are granted a right to be informed about the existence of automated decision making and to obtain meaningful information about the significance, envisaged consequences and logic involved. The right of access is intended to allow data subjects to remain informed about whether and how personal data are being processed. Specifically, the subject should be informed about the existence and purposes of data processing, and the intentions and legal consequences of such processing. By having this information, the data subject should be able to examine the lawfulness of data processing and invoke legal remedies.²⁸

Together, Articles 13-15 form what has been called the ‘Magna Carta’ of data subject’s rights to obtain information about the data held about them, and to scrutinise the legitimacy of data processing.²⁹ Articles 13-14 create notification duties for data controllers, while Article 15 establishes a corresponding right of access for data subjects.³⁰ In contrast to the notification duties of data controllers in Articles 13-14, the right of access has to be invoked by the data subject. The articles are a unit, insofar as they provide the data subject access to identical

profiling and automated decision-making, ‘to ensure transparency, data subjects/consumers should be given access to their ‘profiles’, *as well as to the logic of the decision-making (algorithm)* that led to the development of the profile. In other words: *organisations should disclose their decisional criteria*. This is a crucial safeguard and all the more important in the world of big data’. Whether or not an organisation offers this transparency is a highly relevant factor to be considered also in the balancing exercise” [italics added].

²⁸ Paal, ‘DS-GVO Art. 15 Auskunftsrecht Der Betroffenen Person’ in Paal and Pauly (eds), *Datenschutz-Grundverordnung* (1st edn, beck-online 2017) Rn. 3. Recital 63 GDPR also supports this interpretation in stating that “A data subject should have the right of access to personal data [...] and to exercise that right [...] *in order to be aware of, and verify, the lawfulness of processing*” [italics added].

²⁹ Schmidt-Wudy, ‘DS-GVO Art. 15 Auskunftsrecht Der Betroffenen Person’ in Wolff and Brink (eds), *Datenschutz-Grundverordnung* (18th edn, beck-online 2016) Rn. 2.

³⁰ Martini, ‘DS-GVO Art. 22 Automatisierte Entscheidungen Im Einzelfall Einschließlich Profiling’ in Paal and Pauly (eds), *Datenschutz-Grundverordnung* (1st edn, beck-online 2017) Rn. 4-6.

information, and use the same language. Unlike Articles 13-14, which establish notification duties for the data controller to fulfil when collecting data, Article 15 allows data subjects to request explicitly the information that would otherwise be provided by the controller under Articles 13-14.

Although seemingly insignificant, the change from a notification *duty* to an access *right* has important consequences for the timing of explanations required from the data controller. Given that the phrasing of Article 15(1)h is identical to Article 13(2)f and Article 14 (2)g, one could assume that the right of access similarly only grants access to an *ex ante* explanation of system functionality. However, as stated above, the right of access is dependent upon the request of the data subject and has no deadline; the ‘timeline problem’ of Article 13(2)f and Article 14(2)g does not apply. At first glance, the data subject can request this information at any time, including after an automated decision has been made, making an *ex post* explanation plausible.

Nonetheless, it is reasonable to doubt that the right of access grants a right to *ex post* explanations of specific automated decisions already reached. Consider the semantics of Article 15(1)h. The phrase “envisaged consequences” is future-oriented, suggesting that the data controller must inform the data subject of possible consequences of the automated decision-making *before* such processing occurs. This interpretation follows the timeline constraints of identical provisions in Article 13(2)f and Article 14(2)g discussed above, which only allow for *ex ante* explanations. Data controllers are required to predict the possible consequences of their automated decision-making methods. The term “envisaged” limits these predictions to *ex ante* explanations of system functionality, for instance concerning the general purpose of the system, or the type of impact to be expected from the type of decision it makes. For instance, a credit agency could predict that the scores they produce will impact on credit worthiness (e.g. interest rates). If applied to decisions already made, the phrasing becomes incoherent.³¹ It would seem to require data controllers to predict the personal consequences of

³¹ Peter Bräutigam and Florian Schmidt-Wudy, ‘Das Geplante Auskunfts- Und Herausgaberecht Des Betroffenen Nach Art. 15 Der EU-Datenschutzgrundverordnung’ (2015) 31 Computer und Recht 56, 62 supports this interpretation in commenting on the EP’s draft of the GDPR. The EP’s draft contains the same phrasing as the final adopted text: Article 15(h) requires information about “the significance and envisaged consequences of such processing.” The authors note that the phrasing is very imprecise. An example is given of an Internet provider being obligated to inform that automated processing methods are being used to determine creditworthiness, which could lead to the consequence that the person has to pay in advance (rather than being offered credit). This example shows that the authors believe that Article 15(h) aims to inform about system functionality rather than to provide information about how an individual decision was reached.

decision-making for individual data subjects after an automated decision has been made, including how the decision could be used by other data controllers and processors.

The semantics of the German translation of Article 15(1)h GDPR provides further support. The German Article 15(1)h states:

Tragweite und *angestrebten Auswirkungen* einer derartigen Verarbeitung für die betroffene Person [italics added].

This sentence translates to “the scope and *intended consequences* of such processing for the person concerned” [our translation, italics added]. This indicates that the data controller must inform the data subject about the consequences the controller wishes to achieve with automated decision-making. According to this phrasing, the data controller is not asked to predict consequences but rather explain the scope, intention and the purpose of such processing. This shows that the right of access is not addressing how an individual decision was reached, but rather the duty of the data controller to provide information about the existence, aims and consequences of such processing. This equates to an explanation of system functionality.³²

There are similar reasons to doubt that Article 15(1)h grants an *ex post* right to explanation of *specific decisions*. Data controllers are required to provide information about the “existence of automated decision-making.” This phrase does not suggest an explanation of how a decision was reached. Rather, the data controller is only required to inform the data subject that automated decision-making methods are being used to process her data. Thus, it appears that Article 15(1)h intends to require a type of *ex ante* explanation about the mere usage of automated decision-making methods.

The phrasing of Article 15(1)h, as with Articles 13-14, points to an *ex ante* explanation of *system functionality*. However, data controllers are also required to provide information about the “logic involved” in automated decision-making. As noted in Section 3.2, this phrase, as used, in Articles 13-14 has been argued by others to grant an *ex post* right to explanation. While that assertion has been shown to be flawed due to Articles 13-14 applying prior to automated decision-making, the usage of the same phrase in Article 15 could be argued to grant

³² Prior drafts of Article 15 also support this view. The German translation of the EC draft stated in Article 15(h) “die Tragweite der Verarbeitung und die mit ihr angestrebten Auswirkungen, zumindest im Fall der Maßnahmen gemäß Artikel 20,” which translates to “the scope [rather than significance] of the data processing and its intended consequences.” In addition, the EP draft stated in Article 15(h) “die Tragweite der Verarbeitung und die mit ihr angestrebten Wirkungen.” The phrase “angestrebten Wirkungen” translates to “the scope and its intended effects,” not consequences. Even though the adopted language in the GDPR is vaguer, prior drafts demonstrate Article 15 was intended to inform data subjects about data processor’s “intended effects” for the data subject by using automated decision-making methods. For further discussion, see: *ibid* 61 ff.

a right to both an *ex ante* and *ex post* explanations, because the right of access is not time limited. If correct, Article 15(1)h would grant a right to explanation of *specific decisions*, not only *system functionality*. However, there are further reasons to doubt that this may be the case.

For Article 15(1)h to be coherent as a whole, “logic involved” must be interpreted in connection with the other terms (existence of, significance, envisaged consequences) used of Article 15(1)h, which are limited to *ex ante* explanations of system functionality. Interpreting “logic involved” to grant an *ex post* explanation would mean the other terms of Article 15(1)h would be incoherent, if the right of access was invoked after a decision was made. This interpretation is further supported by a comparison of the language used in Article 15(1)h and Recital 71. Data controllers are obligated to provide information about the

existence of [...] significance [...] envisaged consequences [...] [and] logic involved [...] [in automated decision-making (Article 15(1)h), as opposed to] an explanation of the decision reached (Recital 71).

The phrasing of Article 15(1)h is future-oriented, and appears to refer to the existence of decision-making itself, rather than a specific decision as suggested in Recital 71. If an explanation of specific automated decisions were intended to be granted by Article 15(1)h, as in Recital 71, the usage of different language between the two would be odd.

Nevertheless, given the lack of an explicit deadline for invoking the right of access, we cannot be certain from semantics alone that the right of access is limited to *ex ante* explanations, or explanations of *system functionality*. Despite this, we argue that, as with notification duties in Articles 13-14, and regardless of when it is invoked by the data subject, the GDPR’s right of access only grants an explanation of automated decision-making primarily addressing *system functionality*, not the rationale and circumstances of *specific decisions*. Implementation of the 1995 Directive by Member States show how explanations derived from the right of access in the GDPR are likely to be limited in this sense. To articulate this claim further, it is necessary to examine in detail Member State implementations and interpretations of the Directive’s right of access.

3.3.1 Right of access in the 1995 Data Protection Directive 95/46/EC

It is important to note that a right of access that grants data subjects some explanation of automated decision-making is not new, and has not proven an effective transparency mechanism. Rather, this right has existed since the 1995 Data Protection Directive, and has

been implemented in national law by most European Member States.³³ Similar to the scope of the GDPR's right of access, the Directive's right of access provides means for data subjects to discover whether a controller is processing personal data. If so, the data subject is then entitled to know the extent of data being processed. This shall enable the data subject to scrutinise what data are used and take appropriate action such as requesting rectification or erasure.³⁴ Notably, the Directive's right of access has generally not been interpreted as granting a right to explanation of specific decisions already reached, as it is not part of the safeguards at the time automated decisions are made in Article 15(2)a of the Directive; this distinction is comparable to the difference between Articles 15 and 22 of the GDPR. The Directive names only one safeguard against automated decision-making, namely the right for the data subject to "put his point of view." A right to explanation of specific decisions as a safeguard to ensure lawful automated decision-making was not envisaged.

The implementation and interpretation of the Directive's right of access varied across the Member States. Despite much debate,³⁵ consensus has not emerged concerning the type of information data controllers must disclose to provide data subjects with "knowledge of the logic involved in any automatic processing of data" per Article 12(a).³⁶ A report published in

³³ Douwe Korff, *New Challenges to Data Protection Study-Working Paper No. 2: Data Protection Laws in the EU: The Difficulties in Meeting the Challenges Posed by Global Social and Technical Developments*, EUR. COMM. DG JUSTICE FREEDOM SECUR. REP. (2010), http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1638949 (last visited Dec 8, 2016).

³⁴ See Recital 41 of the Directive "Whereas any person must be able to exercise the provisions to the contrary; right of access to data relating to him which are being processed, in order to verify in particular the accuracy of the data and the lawfulness of the processing; whereas, for the same reasons, every data subject." See also: Paal (n 26) Rn. 19-22, who notes that the general purpose of the right of access according to Article 15 GDPR is the realisation of the so called "two step model." In a first step data subjects have to right to a) know if is data being processed and b) if so, what data is used and in some cases data controllers have to provide additional information (such as the logic involved in automated processing).

³⁵ See for instance debate in the UK House of Lords concerning the meaning of "logic involved" and "trade secrets" in the 1998 Data Protection Act: Grand Committee on the Data Protection Bill, 'Official Report of the Grand Committee on the Data Protection Bill [H.L.] (Hansard, 23 February 1998)' (UK Parliament - House of Lords 1998) <http://hansard.millbanksystems.com/grand_committee_report/1998/feb/23/official-report-of-the-grand-committee#S5LV0586P0_19980223_GCR_1> accessed 15 December 2016. See also Philip Coppel, *Information Rights: Law and Practice* (Bloomsbury Publishing 2014) Chapter 5 Section 3 which discusses how trade secrets limit the right of access and to know about the logic involved in automated processing, and provides an overview of the right of access as implemented by Member States.

³⁶ As an example, Council of Europe, 'The Protection of Individuals with Regard to Automatic Processing of Personal Data in the Context of Profiling' (Council of Europe 2010) Recommendation CM/Rec(2010)13 138 argues that the right of access in Article 12 of the Directive equates to a right to be informed, not a right to an explanation of a decision reached: "Principle 5.1 states that the data subject should be entitled to know about the personal data concerning him or her and the logic which served as a basis for the profiling. It is indeed essential that a data subject *exercising the right of access should be informed of the statistical method and inferences used for his or her profiling, the logic underpinning the processing and the envisaged consequences of the profile's attribution*" [italics added].

2010 on the implementation of the Directive across Member States suggested that it was left to the Member States to define the scope and requirements of the right of access. The report urges clarification of the requirements and limitations on the right of access concerning information about the “logic involved” due to the growing importance of automated decisions.³⁷ In part, the lack of consensus over the meaning and requirements of “logic involved” owes to the relative lack of jurisprudence on the right of access. Despite the Directive having been in force for over 20 years, the requirements and limitations of the right of access applied to automated decision-making have not been extensively clarified or tested in courts across Europe.³⁸

The limited jurisprudence available reveals limitations on the Directive’s right of access. Several overriding interests and exceptions have been identified that significantly limit both the scope of applicability and content of the explanation. In general, data subjects are entitled to receive some information about the general *functionality* of an automated decision-making system, but little to no information about the rationale or circumstances of a *specific decision*. The 2010 report reflects this, noting that the language used in the Directive reflects a very narrow scope of applicability for the right of access due to a number of exceptions and limiting or overriding interests.³⁹ Recital 41 of the Directive clarifies that the right of access can be limited by trade secrets and intellectual property, especially relating to software.⁴⁰ These interests have proven strong limiting factors on the right of access as implemented and tested by Member States.

Several examples can be offered. French data protection law⁴¹ grants data subjects a right to receive information about the “logic involved” as long as it does not contravene copyright regulations. To allow data subjects to challenge decisions, information must be provided about the general logic and types of data taken into account, “but not (or at least not

³⁷ Korff, ‘New Challenges to Data Protection Study-Working Paper No. 2’ (n 31) 86.

³⁸ *ibid* 85.

³⁹ *ibid* 86.

⁴⁰ Note that Recital 41 of the Directive also states in relation to trade secrets that “these considerations must not, however, result in the data subject being *refused all information*” [italics added]. See also: Lee A Bygrave, ‘Automated Profiling: Minding the Machine: Article 15 of the EC Data Protection Directive and Automated Profiling’ (2001) 17 Computer Law & Security Review 17. The author notes that Articles 12 and 15(1) considered together suggest that the data controller must understand and document the logic involved in an automated decision, including the categories of data considered, and their role in the decision-making process. However, the extent to which this information must be given to the data subject can be limited by overriding interests of the controller, including trade secrets.

⁴¹ Korff, ‘New Challenges to Data Protection Study-Working Paper No. 2’ (n 31) 86.

fully) of the weight that is attached” to specific features.⁴² The full code of the automated decision-making system or algorithm does not need to be revealed.⁴³ A similar approach is taken in the UK’s Data Protection Act 1998, which also limits the right of access to protect trade secrets.⁴⁴ As with French law, data controllers

must inform data subjects of the factors which they take into account in the “evaluation” underlying the decision, but without having to reveal the exact weight given to each of these factors (i.e. the copyright-protected algorithm used in the automated decision-taking process).⁴⁵

German data protection law has similarly recognised a distinction between explanations of system functionality and specific automated decisions in §6(a) of the *Bundesdatenschutzgesetz*, which jointly implements Article 12 (right of access) and 15 (safeguards for automated individual decisions) of the Directive.⁴⁶ Notably, Germany implemented a right allowing data

⁴² Douwe Korff, ‘New Challenges to Data Protection Study - Country Report: France’ (European Commission DG Justice, Freedom and Security 2010) 27 <<https://papers.ssrn.com/abstract=1638955>> accessed 15 December 2016.

⁴³ *ibid.*

⁴⁴ Article 8(5) of the UK Data Protection Act 1998 states that “Section 7(1)(d) is not to be regarded as requiring the provision of information as to the *logic involved* in any decision-taking if, and to the extent that, the information *constitutes a trade secret*” [italics added].

⁴⁵ Douwe Korff, ‘New Challenges to Data Protection Study - Country Report: United Kingdom’ (European Commission DG Justice, Freedom and Security 2010) 48 <http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1638938> accessed 15 December 2016.

⁴⁶ Concerning how an explanation is required both as a safeguard against automated decision-making and through the right of access, see: Douwe Korff, ‘New Challenges to Data Protection Study - Country Report: Germany’ (European Commission DG Justice, Freedom and Security 2010) 27 <http://ec.europa.eu/justice/data-protection/document/studies/files/new_privacy_challenges/final_report_country_report_a4_germany.pdf> accessed 15 December 2016.

Concerning § 6(a)2(2) right to explanation: von Lewinski, ‘BDSG § 6a Automatisierte Einzelentscheidung’ in Wolff and Brink (eds), *Beck’scher Online-Kommentar Datenschutzrecht* (17th edn, beck-online 2016) Rn. 45-49; *ibid* Rn. 47-48.1. states the required explanation can be short and must only include the main reason for the decision. The data subject must be able to understand why a decision has not been made in her favour: “Dem Verlangen ist nachzukommen; das Gesetz sieht keine Ausschlussgründe vor. Wie die Beschränkung des Wortlauts auf die „wesentlichen“ Gründe zeigt, kann die Mitteilung der Gründe kurz sein. Die Angaben müssen aber so ausf. und verständlich sein, dass sich mit ihrer Hilfe dem Betroffenen erschließt, “woran es gelegen hat“ (BT-Drs. 16/13219, 8; Roßnagel NJW 2009, 2716 (2719). Je nach den Umständen des Einzelfalls besteht eine Erläuterungspflicht. Nicht vom Wortlaut des Gesetzes gedeckt ist dagegen die Annahme einer Pflicht, den Betroffenen über seine Rechte zu belehren (so aber DKWW/Weichert Rn. 12).”

For discussion of § 6(a)3 (the extended right of access and its limitations due to trade secrets), see: Gola, Klug and Körffler, ‘BDSG § 6a Automatisierte Einzelentscheidung’ in Gola and Schomerus (eds), *Bundesdatenschutzgesetz* (12th edn, 2015) Rn. 18-19. Lewinski Rn. 50-53 commenting on § 6(a)3 (the extended right of access) explains that the data subject needs to have a basis to evaluate that an automated decision is accurate. This shows that there is at least some basis to obtain an explanation after the decision has been made under the extended right of access. However, it is noted that trade secrets restrict this right: only the basis of decision parameters have to be disclosed, but not details of the parameters. The “logical structure” must be disclosed, which refers to the “decision tree”, but not the software or the code. *ibid* Rn. 47-48.1 also notes that the scope (the extent to which information must be disclosed) of the right of access and the safeguards in § 6(a)2 are comparable.

subject's to request an explanation of automated decisions that are not made in their favour. The right is implemented as an explicit safeguard against automated decisions in §6(a)2(2) of the *Bundesdatenschutzgesetz*. The right was voluntarily enacted as a safeguard beyond the requirements set in Article 15 of the Directive, which grants the right to express views as the only safeguard against automated individual decisions. Interestingly, the right to an explanation as an extra safeguard provides some insight into how the Directive's requirement to explain the "logic involved" was interpreted by German legislators. §6(a)3 Austrian Data Protection Act separately extends the right of access enshrined in §19 and §34, allowing data subjects to obtain information about the "logical structure" of automated processing, which refers back to Article 12(a) of the Directive.⁴⁷ If "knowledge of logic involved" in Article 12(a) was intended to establish a right to obtain an explanation about decisions reached, it would not have been necessary for German legislators to enact separately a right to explanation (§6(a)2(2)) in the same article containing the extended right of access (§6(a)3), especially considering both rights must be invoked by the data subject. Even if one wishes to argue that §6(a)2(2) and §6(a)3 refer to the same type of explanation (i.e. of specific decisions), the use of different wording across the articles – "main reasons for the decision and have it explained" in §6(a)2(2), "logical structure of the automated processing of the data that concerns [the data subject]" [our translation] in §6(a)3 – suggests that the two mechanisms entitle the data subject to different types of information.⁴⁸

On safeguards in § 6, Gola, Klug and Körfner Rn. 1-20, commenting on §6(a), explains a right to explanation is granted under § 6(a)2(2), which is one of the safeguards relating to the second exemption of the general prohibition of automated decision making. Safeguards in this article require the data controller to inform about how the decision was reached (3 step model: to be informed about the fact that such a decision was taken and, upon request of the data subject, to receive an explanation of the decision reached and the right to contest the decision). For a discussion, see: *ibid* Rn. 12-14c. The first exception under § 6(a)2(1) (performance of a contract and if the decision has been made in favour of the data subject) does not explicitly require an explanation (unlike § 6(a)2(2)). Rather, the right of access in § 6(a)3 will apply in these cases which, per above, could be interpreted as right to obtain an explanation after the decision has been made. The phrasing of § 6(a)3 (extended right of access) can be interpreted both ways: as granting an explanation both before and after a decision has been made; see: Lewinski Rn. 1-4. Further, the SCHUFA judgements (see: Section 3.3.1) show that judges interpreted the right of access to grant a limited right to obtain an explanation after a decision has been made; see: *ibid* Rn. 50-51.

For further discussion of the overlap of automated decision-making under § 6a and scoring provisions under § 28b see: Gola, Klug and Körfner Rn 6-7, 15-17. Note that the German commentators mentioned do not see a difference between § 6(a)2 right to explanation and § 6(a)3 right of access when discussing the limitations imposed by trade secrets on information given to the data subject. See also: Lewinski Rn. 1-4; Gola, Klug and Körfner Rn. 14-14a.

⁴⁷ Philip Scholz, 'BDSG § 6a Automatisierte Einzelentscheidung' in Simitis (ed), *Bundesdatenschutzgesetz* (8th edn, 2014) Rn. 38.

⁴⁸ Lewinski (n 44) Rn. 50-52 states that the wording of the German Data Protection Act is not clear whether the right of access refers to information about the "process" (meaning the system) or "a decision made."

Following this, German legal commentary and jurisprudence⁴⁹ addressing the extended right of access (§6(a)3) suggest that the information it requires is limited mostly to *system functionality*. The data controller does not need to disclose the software used, as the software is considered to be a trade secret.⁵⁰ Some German commentators believe that some (or the “top four”) features factored into a decision have to be disclosed, but not the algorithm used due to trade secrets.⁵¹ Data controllers are not obligated to explain how the software is working or, especially, to give any details about its code. The data controller is only obligated to explain the logic of the “decision tree.” The “weighting” [our translation] of specific features and the parameters used to make the decision do not have to be disclosed. This is meant to protect trade secrets and manipulation of the decision making system.⁵²

This interpretation of the right of access as being limited to system functionality in order not to contravene trade secrets is also reflected in German jurisprudence. According to

⁴⁹ BGH: kein umfassender Auskunftsanspruch gegen SCHUFA 2014 (VI ZR 156/13) BDSG § 34 Abs. 4; Mario Martini, ‘Big Data Als Herausforderung Für Den Persönlichkeitsschutz Und Das Datenschutzrecht’ [2014] DVBI 1481.

⁵⁰ Gola, Klug and Körfner (n 44) Rn. 18-19 “Über die allgemeinen Auskunftsansprüche nach § 19 bzw. § 34 sind nach Absatz 3 auch Angaben zu machen über den logischen Aufbau der automatisierten Verarbeitung. Dem Betroffenen soll in erster Linie veranschaulicht werden, was mit seinen Daten geschieht. Er soll in die Lage versetzt werden, Gesichtspunkte vorzubringen, die inhaltliche Überprüfung der automatisiert vorgenommen „vermuteten“ Bewertung ermöglichen. Unter dem Gesichtspunkt des Schutzes von Geschäftsgeheimnissen und des Urheberrechtsschutzes umfasst die Auskunftspflicht jedoch nicht die verwendete Software (zur sog. Scoreformel als Geschäftsgeheimnis vgl. BGH, NJW 2014, 1235, der die Frage der Reichweite des Auskunftsanspruchs über den logischen Aufbau der automatisierten Verarbeitung mangels Vorliegens einer automatisierten Einzelentscheidung dahinstehen ließ).“

⁵¹ Korff, ‘New Challenges to Data Protection Study-Country Report’ (n 44) 27 ff.

⁵² Lewinski (n 44) Rn. 50-53 “Nach § 6a Abs. 3 wird das Auskunftsanspruch nach § 19 (für den öffentlichen Bereich) und § 34 (für den nicht-öffentlichen Bereich) um den Aspekt des logischen Aufbaus erweitert. Dies meint die grundlegenden Entscheidungsmaßstäbe, nicht aber die Beauskunftung von Details. Mit „logischem Aufbau“ ist (nur) der Entscheidungsbaum gemeint, nicht aber (auch) die Software als solche (Gola/Schomerus Rn. 18) und erst recht nicht der Quellcode (vgl. Erwägungsgrund 41 der RL 95/46/EG; BT-Drs. 14/4329, 38). Hierdurch werden zum einen Unternehmensgeheimnisse geschützt (Plath/Kamlah Rn. 30), zum anderen aber auch sollen die automatisierten Einzelentscheidungssysteme vor Manipulationen geschützt werden, die möglich wären, wenn man den genauen Ablauf der (automatisierten) Entscheidung kennt (Wolber CR 2003, 623 (626); Koch MMR 1998, 458 (458)). Auch die Entscheidungsparameter iE müssen nicht beauskunftet werden (Beckhuse BKR 2005 335 (343) mit Verweis auf die Fassung des Referentenentwurfs). Allerdings muss nach Erwägungsgrund 41 der RL 95/46/EG der Betroffene die Richtigkeit der automatisierten Einzelentscheidung überprüfen können, so dass er neben den verwendeten Datenarten auch über deren (ungefähre) Wertigkeit informiert werden muss (anders Taeger/Gabel/Mackenthun Rn. 25; vgl. BGH Urt. v. 28.1.2014 – VI ZR 156/13).”

Bräutigam,⁵³ the German SCHUFA⁵⁴ judgements⁵⁵ show that data subjects do not have a right to investigate fully the accuracy of automated processing systems (in this case, credit scoring), as the underlying formulas are protected as trade secrets. The protected formula would consist of, for example, statistical values, weighting of certain elements to calculate probabilities (e.g. the likelihood of loan repayment), and reference or comparison groups.

The judgments indicate that all three elements of the right of access enshrined in Article 12(a) of the Directive aim to provide general information about the usage and purpose of data processing. Concrete elements of the screening procedures do not have to be disclosed.⁵⁶ The data subject is entitled to know which data and features were taken into account when the decision was made, in order to be able to contest the decision or demand that inaccurate or incomplete data be rectified. However, the weighting of these elements, the method (scoring formula), the statistical values, and the information about the reference groups⁵⁷ used does not have to be disclosed.⁵⁸ The judgements state that jurisprudence, academic literature, and legal commentary commonly agree that the abstract methods used to define credit scores do not have to be disclosed, and that this position is in accordance with the intention of German data protection legislation.⁵⁹

It is worth noting that the SCHUFA judgements do not explicitly address automated decision-making, as the court decided an automated decision was not made because automated processing was only used for preparation of evidence, while the actual decision was made by

⁵³ Bräutigam and Schmidt-Wudy (n 29) 62; Jens Hammersen and Ulrich Eisenried, 'Ist „Redlining“ in Deutschland erlaubt? Plädoyer Für Eine Weite Auslegung Des Auskunftsanspruchs' [2014] ZD Zeitschrift für Datenschutz 342.

⁵⁴ Amongst others, judgement of the German Federal Court BGH, ZD 2014, 306. It is important to note that the German court refused to talk about the extent to which the data subject is entitled to know about the logic involved as the Court ruled that in this case there was no automated decision, as explained in: Gola, Klug and Körffler (n 44) Rn. 18-19.

⁵⁵ Judgement of the German Federal Court Bundesgerichtshof 28.01.2014 – VI ZR 156/13. Also. LG Giessen. 06.03.2013 – 1 S 301/12. Also, AG Giessen 11.10.2014 – 47 C 206/12.

⁵⁶ Judgement of the German Federal Court: Scoring und Datenschutz BGH, 28. 1. 2014 - VI ZR 156/13 (LG Gießen, AG Gießen) p. 169.

⁵⁷ 'Reference groups' refer to profiles or classifications that inform the assessment of creditworthiness. For a discussion, see for instance: Mittelstadt and others (n 6); Mireille Hildebrandt and Serge Gutwirth, *Profiling the European Citizen* (Springer 2008).

⁵⁸ Judgement of the German Federal Court : BGH: Umfang einer von der SCHUFA zu erteilenden Auskunft BGH, Urteil vom 28.1.2014 - VI ZR 156/13 (LG Gießen, AG Gießen) p. 490. The judgements show that the right of access is very limited: „Zu den als Geschäftsgeheimnis geschützten Inhalten der Scoreformel zählen die im ersten Schritt in die Scoreformel eingeflossenen allgemeinen Rechengrößen, wie etwa die herangezogenen statistischen Werte, die Gewichtung einzelner Berechnungselemente bei der Ermittlung des Wahrscheinlichkeitswerts und die Bildung etwaiger Vergleichsgruppen als Grundlage der Scorekarten“

⁵⁹ The court, however, acknowledged that there is discussion about whether or not information about the weighting of features and reference groups should be included in disclosures, and to what extent.

a human being.⁶⁰ The judgements are nonetheless insightful insofar as they demonstrate a strong tendency to protect trade secrets in relation to the right of access. As discussed below in Section 3.3.1, this case provides an example of an important limitation on a right to explanation established on any of the three legal bases in the GDPR identified above. Automated decision-making is defined in both the Directive and GDPR as decision-making based *solely* on automated processes.⁶¹ Quite crucially, this creates a loophole whereby even nominal involvement of a human in the decision-making process allows for an otherwise automated mechanism to avoid invoking elements of the right of access (both in the Directive and GDPR) addressing automated decisions.

Finally, Austrian legislators similarly implemented the requirements of Article 12a and 15 of the Directive in § 49(3)⁶² of the Austrian Data Protection Act. As opposed to German law, the right to obtain an explanation about how an individual decision was reached was not implemented as a safeguard. Only the right to express one's view is named as one of the mandatory safeguards, as mandated by Article 15 of the Directive. §49(3) establishes an extended right of access (§26) which is the data subject's right to know, upon request, about the logic of the process of automated decision making.⁶³

Austrian jurisprudence⁶⁴ is very vague on the right of access and automated decision-making. Existing judgements do not fully explain how much the data controller is obligated to

⁶⁰ Reflecting this, the court subsequently refused to discuss the extent to which the logic involved needed to be disclosed by the data controller. Rather, it addressed the general obligation of data controllers to provide information about the data being processed, derived from the right of access.

⁶¹ Article 15(1) of the Directive defines 'automated individual decisions' as "a decision which produces legal effects concerning him or significantly affects him and which is based solely on automated processing of data intended to evaluate certain personal aspects relating to him, such as his performance at work, creditworthiness, reliability, conduct, etc." Similarly, Article 22(1) GDPR defines 'automated decision-making' as "a decision based solely on automated processing, including profiling, which produces legal effects concerning him or her or similarly significantly affects him or her."

⁶² Bundesgesetz über den Schutz personenbezogener Daten (Datenschutzgesetz 2000 - DSG 2000) 2000 (DSG 2000) 49 Abs (3). - "Dem Betroffenen ist bei automatisierten Einzelentscheidungen auf Antrag der logische Ablauf der automatisierten Entscheidungsfindung in allgemein verständlicher Form darzulegen. § 26 Abs. 2 bis 10 gilt sinngemäß."

⁶³ Judgement of the Austrian Data Protection Commission 24.04.2009, app. nr. K121.461/0003-DSK/2009.

⁶⁴ Amongst others, Judgements of the Austrian Data Protection Commission: 24.04.2009 app. nr. K121.461/0003-DSK/2009, addressing the need to explain the system used; 27.08.2010 - app. nr. K121.470/0007-DSK/2009, addressing whether a process counts as an automated decision; 20.03.2009 - app. nr. K121.467/0007-DSK/2009; 25.04.2008- app. nr. K121.348/0007-DSK/2008; 25.04.2008 - app. nr. K121.348/0007-DSK/2008; 25.05.2012 - app. nr. K121.791/0008-DSK/2012; 9.06.2009 - app. nr. K121.460/0008-DSK/2009; 19.06.2009 - app. nr. K121.494/0013-DSK/2009; 02.02.2007 - app. nr. K121.238/0006-DSK/2007; Austrian Administrative Court judgements 11.12.2009- 2 app. nr. 009/17/0223; 15.11.2012- app. nr. 2008/17/0096; 20.02.2008- app. nr. 2005/15/0161.

disclose under the right of access, and are in some sense contradictory. In most cases, an obligation was recognised to explain how the system in questions functions.⁶⁵ In contrast, one ruling stated that the right of access according to § 26 and the right to know about the logic of the process (§49(3)) also includes the criteria and the weighting of the criteria which would then allow the data subject to understand how a decision was reached. However, the court simultaneously acknowledged that trade secrets can limit this right. The court concluded that the extent to which the data controller needs to disclose decision criteria and weighting must be determined on a case by case basis.⁶⁶ In another case, the court denied the existence of individual automated decision because the criteria used were based on a large group rather than on the individual. Therefore, the right of access and to know about the logic of automated processing does not apply, if the basis of that decision is a group (“peer group” [our translation]) rather than (data about) the individual.⁶⁷ This distinction highlights a tension in the definition of automated decision-making and profiling, insofar as automated processing of data describing groups, rather than individuals, will not allow for any type of explanation or invocation of the right of access.⁶⁸

⁶⁵ According to a judgement of the Austrian Data Protection Commission 25.04.2008- app. nr. K121.348/0007-DSK/2008, the obligation is with the data controller to inform about the procedure of automated decision-making in an understandable manner: „die Pflicht, dem Betroffenen den Ablauf der automatisierten Entscheidungsfindung in allgemein verständlicher Form darzulegen.“

⁶⁶ Judgement of the Austrian Data Protection Commission 12.12.2007 app. nr. K121.313/0016-DSK/2007. See also 12.12.2007 app. nr. K121.313/0016-DSK/2007. It is important to note that in the latter case the court talked about a hypothetical obligation of the data controller, since the applicant did not lodge a request under § 49(3) but rather invoked his general right of access under § 26. The court stated that if the data subject had lodged a complaint under § 49(3), the data controller would need to disclose this information, but how far trade secrets would limit the disclosure would need to be examined on a case to case basis, therefore there is no precedent yet: „Sollte der Beschwerdeführer allerdings künftig einen dem § 49 Abs. 3 DSG 2000 entsprechenden Antrag stellen, so wird ihm die Beschwerdegegnerin neben den (bereits beauskunfteten) Kriterien für die Bonitätsbeurteilung auch deren Wertigkeit mitteilen müssen (also etwa mit welchem Gewicht offene oder ausgebuchte Mahnungen bzw. Insolvenzen etc. für die Bonität maßgeblich sind und in welchem Zeitraum diese Mahnungen bzw. Insolvenzen etc. fallen müssen, um relevant zu sein). Nur so würde richtlinienkonform § 49 Abs. 3 DSG 2000 entsprochen werden können, da der logische Ablauf einer automatisierten Einzelentscheidung allein anhand der einfließenden Kriterien nicht verstehbar ist, sondern auch die Kenntnis von der Wertigkeit, mit der sie berücksichtigt werden, voraussetzt. Nur so kann sichergestellt werden, dass für den Betroffenen „jedenfalls nachvollziehbar“ ist, was Grund für die Ablehnung eines Dauerschuldverhältnisses zwischen Betroffenen und Beschwerdegegnerin war. Wie weit etwaige Betriebs- oder Geschäftsgeheimnisse die Pflicht zur Offenlegung der Logik einer automatisierten Einzelentscheidung zu beschränken vermögen, wird anlässlich der Behandlung eines Antrags nach § 49 Abs. 3 DSG 2000 im Einzelfall zu beurteilen sein.“

⁶⁷ In this case it was found that there is no automated decision because the decision was based on a group (“peer group”) rather than the individual and it was stated that such an automated decision (marketing purposes) would not have enough significant effects and consequences to have § 49 (3) apply; see: Judgement of the Austrian Data Protection Commission 10.03.2016 app. nr. DSB-D122.322/0001-DSB/2016.

⁶⁸ This loophole points towards the need to recognise some type of group privacy right in data protection law, as processing of identifiable data is not required to learn about and take actions towards an individual. For further discussion, see: Mittelstadt and others (n 6); Linnet Taylor, Luciano Floridi and Bart van der Sloot (eds), *Group Privacy: New Challenges of Data Technologies* (1st edn, Springer 2017).

3.3.2 From the Directive to the GDPR: the right to be informed

At best, the Directive's right of access provides a limited 'right to be informed' with an explanation of the system's functionality which is heavily limited by trade secrets. The loophole – through which automated processes that merely produce evidence for decision-making (rather than actually making decisions) are not subject to the right of access (specifically, the provision to disclose information about the "logic involved") – has also proven to be a significant limiting factor. A relative lack of jurisprudence across Member States has not helped clarify and unify the requirements. This is problematic given the current and emerging growth in automated decision-making and data processing.

Quite ironically, given its initial purposes, the GDPR appears to offer even less protection to data subjects concerning explanations of automated decision-making than some current data protection laws in Europe based on the Directive.⁶⁹ In particular, the right of access appears to offer less protection for data subjects' interests.⁷⁰ The use of future –oriented semantics in the GDPR's right of access (unlike the Directive which did not explicitly acknowledge a decision-making timeline), as well as its relationship with notification duties, suggests that the GDPR goes further to limit the right of access regarding automated decision-making to *ex ante* explanations of system functionality.⁷¹ The phrasing of Article 15 GDPR in particular points towards a general explanation of the existence and functionality of automated decision-making systems. Article 12(a) of the Directive grants data subjects a right to obtain "knowledge of the logic involved in any automatic processing of data."⁷² It is interesting to

⁶⁹ Martini (n 28) Rn. 42-44. explains how other provision of the GDPR falls behind and weakens the current data protection standards, e.g. in terms of contractual relations as a legitimate reason for automated decisions, in that regards see also Alexander Roßnagel, Philipp Richter and Maxi Nebel, 'Besserer Internetdatenschutz Für Europa. Vorschläge Zur Spezifizierung Der DS-GVO' (2013) 3 Zeitschrift für Datenschutz 103.

⁷⁰ Hammersen and Eisenried (n 51), commenting on the EC's original 2012 draft, note that the interpretation of the Directive's right of access through jurisprudence shows that the right grants a very weak type of explanation of automated processing of data. The data subject is not provided a basis to scrutinize the outcome of automated processing of data, including the method or algorithm used, or reference groups. The GDPR has not strengthened the right of access compared to the Directive in any notable way, meaning similar limitations are likely to apply.

⁷¹ The Directive's right of access does not refer to the future, or use identical language to notification duties. The latter point is unremarkable, as the Directive did not contain notification duties. We can thus only discuss whether a right to explanation of system functionality or specific decisions was derived by Member States from the right of access in Article 12 of the Directive, as opposed to *ex ante* or *ex post* explanations.

⁷² Recital 41 makes a similar claim: "Whereas any person must be able to exercise the right of access to data relating to him which are being processed, in order to verify in particular the accuracy of the data and the lawfulness of the processing; whereas, for the same reasons, every data subject must also have the right to know the logic involved in the automatic processing of data concerning him, at least in the case of the automated decisions referred to in Article 15 (1); whereas this right must not adversely affect trade secrets or intellectual property and in particular the copyright protecting the software; whereas these considerations must not, however, result in the data subject being refused all information."

note that the phrase “knowledge of” is broader than Article 15 GDPR,⁷³ which requires only information about the “existence of” automated decision-making. As argued above, this phrase in the GDPR requires that the data subject be informed merely about the usage of automated decision-making methods. The change of wording indicates that the intention of the right of access in the GDPR is to grant access to information about the “usage” of such automated decision-making. Again, this suggests an even stronger intention to limit the right to explanations of *system functionality*, not the rationale and circumstances of *specific decisions*.

Legal scholars are already debating the scope of the right of access in the GDPR. According to German commentary⁷⁴ and German legal scholars, it is sufficient to be informed about the envisaged consequences in a very simple manner. For instance, an explanation of how a low rating of creditworthiness can affect the choice of payment options would be sufficient.⁷⁵ The type of explanation recognised in German jurisprudence⁷⁶ and German commentary⁷⁷ is limited by overriding interests of the data controller, e.g. protection of trade secrets, or prevention of ‘gaming the system’ by users. The process that the algorithms use does not have to be disclosed.⁷⁸ Furthermore, the rating of similar groups does not have to be disclosed.⁷⁹

These early commentaries follow the general interpretation of the right of access in the 1995 Directive, according to which data controllers do not need to explain fully the rationale and circumstances of a specific decision to provide data subjects with “meaningful information about the logic involved” (Article 15(1)h GDPR). Rather, the information offered by data controllers will address general system functionality, and will be heavily curtailed to protect the controller’s interests (e.g. trade secrets, intellectual property).⁸⁰ It is worth noting that

⁷³ The right of access only exists if the data controller has personal data of the data subjects, see: Mireille Hildebrandt, ‘The Dawn of a Critical Transparency Right for the Profiling Era’, *Digital Enlightenment Yearbook 2012* (IOS Press 2012). Further, the right of access is limited as far as data of other data subjects are concerned, see: Mireille Hildebrandt and Serge Gutwirth (n 55).

⁷⁴ Paal, ‘DS-GVO Art. 13 Informationspflicht Bei Erhebung von Personenbezogenen Daten Bei Der Betroffenen Person’ in Paal and Pauly (eds), *Datenschutz-Grundverordnung* (1st edn, beck-online 2017); Martini (n 28) Rn. 42-44.

⁷⁷ Paal (n 72).

⁷⁸ *ibid.*

⁷⁹ BGH (n 47).

⁸⁰ Hildebrandt (n 71) 52. Recitals 47 and 63 GDPR address protection of the interests of data controllers. Recital 63 notes, in relation to the right of access, “That right should not adversely affect the rights or freedoms of others, including trade secrets or intellectual property and in particular the copyright protecting the software.”

additional limitations can also be imposed to protect the interests of other parties via Union or Member State law.⁸¹ Paal⁸² also notes that the purpose of Article 15 GDPR is to allow data subjects to be informed about the usage of automated decision-making. As the scope of information data controllers are required to disclose in Article 15 is the same as in Article 13, Article 15 similarly requires only limited information about the functionality of the automated decision-making system.

As with the Directive, the practical requirements and utility of the GDPR's right of access will similarly only be revealed through testing and clarification via jurisprudence and expert opinion, such as from the European Data Protection Board established in Article 68 GDPR.⁸³ However, the implementation of the Directive's right of access strongly suggests that the GDPR's right of access will be far from the *ex post* 'general' right to explanation of system

⁸¹ Article 23(1) GDPR addresses possible further limitations on obligations and rights under Articles 12-22, including the right of access: "Union or Member State law to which the data controller or processor is subject may restrict by way of a legislative measure the scope of the obligations and rights provided for in Articles 12 to 22 and Article 34, as well as Article 5 in so far as its provisions correspond to the rights and obligations provided for in Articles 12 to 22, when such a restriction respects the essence of the fundamental rights and freedoms and is a necessary and proportionate measure in a democratic society to safeguard: a) national security; (b) defence; (c) public security; (d) the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, including the safeguarding against and the prevention of threats to public security; (e) other important objectives of general public interest of the Union or of a Member State, in particular an important economic or financial interest of the Union or of a Member State, including monetary, budgetary and taxation matters, public health and social security; (f) the protection of judicial independence and judicial proceedings; (g) the prevention, investigation, detection and prosecution of breaches of ethics for regulated professions; (h) a monitoring, inspection or regulatory function connected, even occasionally, to the exercise of official authority in the cases referred to in points (a) to (e) and (g); (i) the protection of the data subject or the rights and freedoms of others; (j) the enforcement of civil law claims." Article 89(2) similarly allows for limitations on rights and obligations for processing for scientific or historical research or statistical purposes: "Union or Member State law may provide for derogations from the rights referred to in Articles 15, 16, 18 and 21 subject to the conditions and safeguards referred to in paragraph 1 of this Article in so far as such rights are likely to render impossible or seriously impair the achievement of the specific purposes, and such derogations are necessary for the fulfilment of those purposes." Finally, Article 89(3) address limitations for processing for archiving purposes or in the public interest: "Union or Member State law may provide for derogations from the rights referred to in Articles 15, 16, 18, 19, 20 and 21 subject to the conditions and safeguards referred to in paragraph 1 of this Article in so far as such rights are likely to render impossible or seriously impair the achievement of the specific purposes, and such derogations are necessary for the fulfilment of those purposes."

⁸² See: Paal (n 26) Rn. 19-22. The general purpose of the right of access according to Article 15 GDPR is the realisation of the so called "two step model." In a first step data subjects have to right to a) know if their data is being processed and b) if so, what data are used. In some cases data controllers have to provide additional information (such as the logic involved in processing). Further, *ibid* Rn. 31 the author shows that the content and scope of the disclosure according to Article 13 is the same as in Article 15. The authors cite Bräutigam and Schmidt-Wudy (n 29) in discussing the scope of Article 13 GDPR as one of the sources to limit the data controller's obligations under Article 15. This shows that Articles 13 and 15 GDPR do not differ in the obligation of the data controllers to disclose information. See also: Paal (n 72) Rn. 31-33.

⁸³ The Board fills a similar role to the Article 29 Working Party established by the Directive. Interestingly, the Board has explicitly been called upon in Article 70(1)f to "issue guidelines, recommendations and best practices...for further specifying the criteria and conditions for decisions based on profiling pursuant to Article 22(2)." In doing so, the GDPR is implicitly acknowledging that the applicability of the three cases specified in Article 22(2) (contract, Union or Member State law, or consent) remains an open issue.

functionality *and* specific decisions, which we have argued it is mistakenly attributed to the GDPR. Rather, through the right of access, the GDPR will similarly grant a ‘right to be informed’ about automated decision-making, limited in applicability along the lines above and those described in the following section.

4 What if a right to explanation were granted?

Although a meaningful right to explanation of specific automated decisions will not be introduced by the GDPR, the contribution of such a right to the accountability and transparency of automated decision-making may provide compelling reasons for legislators or data controllers to introduce one in the future. It is possible to envisage at least four main scenarios that may lead to a right of explanation of specific automated decisions in practice:

1. An additional legal requirement is enacted by Member States, separate from the GDPR, granting a right of explanation of specific decisions (similar to actions taken by German legislators under the 1995 Directive).
2. Based on GDPR Article 22(3) and Recital 71, data controllers voluntarily choose to offer a right to explanation of specific decisions as a “suitable [...] safeguard” as required in GDPR Article 22(3) and Recital 71. The right would be an additional and voluntary safeguard to those already required by Article 22(3). Controllers could do this on the basis that an explanation is required to invoke one of the three legally required Article 22(3) safeguards, i.e., express their views, obtain human intervention, or contest a decision.
3. Future jurisprudence broadly interprets the safeguards against automated decision-making (Article 22(3)) to establish a right to explanation of specific decisions. This could occur, for example, on the basis that an explanation of the rationale of an automated decision is required in order to contest it.
4. Future jurisprudence establishes that the right of access (Article 15 GDPR) provides a basis for explanations of specific automated decisions, as a requirement to provide information about the “existence of [...] logic involved [...] significance [...] [or] envisaged consequences” of automated decision-making (Article 15(h)1).

Of these scenarios, the third and fourth seem to be the most immediately plausible at the moment. Concerning the third, Article 22(3) guarantees that human intervention is available for automated decisions rendered in fulfilment of a contract or with consent (see below). On this basis, one may argue that, although it is certainly not explicit in the phrasing of Article

22(3), the right to contest a decision is meaningless if the data subject cannot understand how the contested decision was taken. The right to contest has already been interpreted by Member States, in enacting the 1995 Directive, as merely a right to force a controller to make a new decision. This interpretation is found in the UK Data Protection Act 1998 (Article 12(2)b): subjects can demand a new decision to be made, albeit without any way to assess the reliability of the old decision. A broad reading of Article 22(3), according to which an explanation is required to contest a decision, would strengthen the right to contest. In this case, the argument for a right to explanation of specific decisions could be further buttressed by drawing on the rights to fair trial and effective remedy enshrined in Articles 6 and 13 of the European Convention on Human Rights. Without an explanation of how the algorithm works, both rights are hard to enforce, because the decisions/evidence used will be impossible to contest in court.⁸⁴

Concerning the fourth option, implementation of the right of access in the 1995 Directive has shown the need for interpretation of vague provisions by Member States and national courts. As noted above, consensus has not emerged over the meaning or requirements implied for data controllers when explaining the “logic involved” in automated individual decisions. Austrian jurisprudence has demonstrated that the scope of “logic involved” is sufficiently broad to include that some elements of the rationale or circumstances of a specific decision be explained along with system functionality, albeit limited severely by data controller’s interests (e.g. trade secrets). Despite aiming to unify data protection law across the Member States, the GDPR’s right of access will need to be similarly interpreted and tested. Given that the reference to “*logic involved*” occurs in both the Directive and GDPR, it is plausible that future legal interpretation of the right of access could establish a limited right to explanation of specific decisions.

4.1 Limitations on a right to explanation derived from the right of access (Article 15) or safeguards against automated decision-making (Article 22(3))

Assuming one or indeed a combination of these four scenarios occurs, and hence that a right to explanation of specific decisions is granted, other provisions in the GDPR may still limit its

⁸⁴ Tal Zarsky, ‘Transparent Predictions’ (2013) 2013 University of Illinois Law Review <http://papers.ssrn.com/sol3/Papers.cfm?abstract_id=2324240> accessed 17 June 2016. A right to contest realised through expert human intervention may be the most pragmatic safeguard against automated decisions: elsewhere it has been argued that transparency disclosures prove more impactful if tailored towards trained third parties or regulators as opposed to data subjects themselves.

scope significantly. A ‘general’ right to explanation as proposed elsewhere (see Section 1), seemingly applicable to all types of automated processing, would not exist. A primary limitation is the narrow definition of automated decision-making in Article 22(1),⁸⁵ defined as

a decision based solely on automated processing, including profiling, which produces legal effects concerning [the data subject] or similarly significantly affects him or her.

An automated process must meet this definition for Article 15(1)h (right of access) or Article 22(3) to apply, and thus for a future right to explanation established on either basis to be invoked.

Automated decision-making must have “legal or other significant effects,” with a decision based “solely on automated processing of data” (Article 22(1)). The latter requirement opens a loophole whereby any human involvement in a decision-making process means it is not ‘automated decision-making’.⁸⁶ While the required level of human involvement is not clear in practice, the phrase ‘solely’ suggests even some nominal human involvement may be sufficient. There is still uncertainty as to whether the usage of automated processing for the preparation of a decision ultimately acted upon by a human constitutes a decision “solely based on automated processing,” if the human does not interfere, verify, or modify the decision or decision-making rationale.⁸⁷ Preparation of evidence for a decision, and making the decision itself, are not necessarily equivalent acts.⁸⁸ Martini believes that automated processing of data for “assistance to make a decision” or “preparation of a decision” is not within the scope of Article 22.⁸⁹ Decisions based predominantly on automated processes, but with nominal human involvement, would thus not invoke Article 15(1)h (right of access) or Article 22(3) (safeguards against automated decision-making), and thus would not require an explanation of system functionality or the rationale of specific decisions, assuming that such a right to explanation was established on either basis.

Interpretation of Article 15 of the Directive, which was also limited to decisions “based solely on automated data processing,” does not provide clarification. The strict reading of ‘solely’ by Martini was reflected in the SCHUFA judgements already discussed (see: Section

⁸⁵ Bygrave (n 38) discusses comparable limitations on the definition of ‘automated individual decisions’ in the 1995 Directive.

⁸⁶ This position is also adopted in: Fusion (n 1); Bygrave (n 38); Hildebrandt (n 71) 51 in reference to the EC’s 2012 draft, explains that human intervention will render Article 20 inapplicable.

⁸⁷ Martini (n 28) Rn. 16-19.

⁸⁸ Bygrave (n 38).

⁸⁹ Martini (n 28) Rn. 20.

3.3.1). In contrast, Bygrave argues that a relative notion of ‘solely’ is required for the phrase to be meaningful. According to this position, decisions formally attributed to humans, but originating “from an automated data-processing operation the result of which is not actively assessed by either that person or other persons before being formalised as a decision,” would fall under the scope of ‘automated decision-making’.⁹⁰ It is not clear how this provision in the GDPR will be interpreted in the future.

The scope of data processing to which Article 22 (and Recital 71) applies was narrowed in the adopted version of the GDPR compared to prior drafts. The phrase “a decision based solely on automated processing” proved a point of contention between the EC and EP drafts. Article 20(5) of the EP’s proposed amendments⁹¹ to the EC’s draft⁹² adds the phrase ‘predominantly’ to the measures to which the Article would apply (“Profiling which leads to measures producing legal effects concerning the data subject or does similarly significantly affect the interests, rights or freedoms of the concerned data subject shall not be based *solely or predominantly on automated processing and shall include human assessment* [...]” [italics added]). Following this, the EP wanted to restrict automated decisions on a broader basis than the EC, i.e. those *predominantly* and not only *solely* on automated processes. With “predominantly” not being adopted in the final text of the GDPR, it would appear the strict reading of “solely” was intended.

Questions can also be raised over what constitutes “legal effects” or “similarly significant effects”⁹³ required for Article 22 to apply. Recital 71 provides some guidance, as it describes certain situations of “significances” e.g. online credit applications. Where a decision has no legal or significant effect, Article 22 does not apply. For an automated decision to have legal effects on the data subjects, it would need to affect their legal status.⁹⁴ Since in most cases the data subject has no legal right to be hired or to be approved for a credit application, cases of being denied an interview or credit by an automated process would not fall under these categories.⁹⁵ Admittedly, such cases could be considered to have “similarly significant” effects.

⁹⁰ Bygrave (n 38).

⁹¹ European Parliament Committee on Civil Liberties, Justice and Home Affairs (n 17).

⁹² European Commission (n 18).

⁹³ Martini (n 28) Rn. 25-28. Legal effects must influence the legal status of the data subject, whereas significant effects could mean [our translation of Rn. 27] “being denied to be part of a contract or being denied to choose a payment method e.g. PayPal.”

⁹⁴ Bygrave (n 38).

⁹⁵ Lewinski (n 44) Rn. 28-31: “Bei Rückbesinnung auf allgemeine zivilrechtliche Prinzipien kann allerdings der Nichtabschluss eines Vertrages keine „rechtliche Folge“ iSd Rechtsfolge sein. Denn da es grundsätzlichen keinen Anspruch auf den Abschluss eines Vertrages gibt, kann der Nichtabschluss auch kein rechtlicher

However, the term “similarly significant” is itself vague and requires interpretation; significance varies on the perception of the data subject (effects of receiving a rejection letter will depend on the economic situation of the data subject, for instance), whereas impacts on legal status can be determined according to the letter of the law.⁹⁶ Further, in practice it may cause a burden for the data subject to prove that processing affects them significantly.⁹⁷

As these constraints demonstrate, the definition of automated decision-making in Article 22(1) significantly narrows the scope of any future right to explanation. Automated decision-making that does not meet the definition provided in Article 22(1) would not be constrained by provisions of Article 22, or the additional measures required as part of notification duties (Article 13(2)f and 14(2)g) or the right of access (Article 15(1)h), including information regarding the “logic involved” (see: Section 3.3). A right to explanation implemented through any of the four paths specified above would similarly not apply, still significantly narrowing the right’s potential applicability to a very narrow range of cases meeting all the requirements in Article 22(1) and discussed in this section.

A further factor would constrain the information offered as part of an explanation. As indicated in the discussion of the right of access in the 1995 Directive, any future right to explanation would likely also be limited by overriding interests of the data controller. Recital 63 of the GDPR similarly establishes that the right of access should not infringe upon the rights and freedoms of others, including data controllers. The right can be limited for the sake of trade

Nachteil sein (Wolber CR 2003, 623 (626); Scholz/Simitis Rn. 29; aA DKWW/Weichert Rn. 8). Dies gilt auch für arbeitsrechtliche Verträge, also automatisierte Einzelentscheidungen bei Einstellungsverfahren und in Assessment-Centern), da im nicht-öffentlichen Bereich kein Anspruch auf Einstellung besteht. Anderes mag für den Öffentlichen Dienst gelten, da hier das Leistungsprinzip (Article 33 Abs. 2 GG) die Einstellung des Besten vorschreibt, so dass der Bestqualifizierte (jedenfalls im Konkurrentenverhältnis) einen Einstellungsanspruch hat [...] Zwar impliziert die Gesetzesbegründung (BT-Drs. 16/10529, 13), dass insbes. Kreditentscheidungen von der Regelung des § 6a erfasst sein sollen. Doch bleibt sie die Antwort auf die letztlich entscheidende Wertungsfrage schuldig, welches Maß einer Beeinträchtigung „erheblich.“ ibid Rn. 32-37. “Jede für den Betroffenen irgendwie negativ fühlbare Entscheidung ist eine Beeinträchtigung. Freilich wird man dies nach objektiven Maßstäben beurteilen müssen.³⁴ Entscheidend kommt es jedenfalls darauf an, ob in der faktischen Folge eine „erhebliche Beeinträchtigung“ liegt. Hier ist auf die Umstände des Einzelfalles, die alternative Verfügbarkeit eines Gutes und die Sozialadäquanz einer Beeinträchtigung zu schauen.³⁵ Die Erheblichkeit der Beeinträchtigung bestimmt sich nach objektiven Kriterien, denn § 6a ist keine Antidiskriminierungsvorschrift, sondern regelt als Norm des objektiven Technikrechts „nur“ Datenverarbeitungsverfahren. Zudem zeigt ein Blick auf Abs. 2 Nr. 2, dass subjektive Entscheidungselemente und individuelle Aspekte von der verarbeitenden Stelle später vorgebracht werden können (arg. Abs. 2 Nr. 2 aE). Dies wäre überflüssig, wenn sie bereits bei der Erheblichkeit zu berücksichtigen wären.”

⁹⁷ Hajar Malekian, ‘Profiling under General Data Protection Regulation (GDPR): Stricter Regime?’ [2016] ResearchGate

<https://www.researchgate.net/publication/304102392_Profiling_under_General_Data_Protection_Regulation_GDPR_Stricter_Regime> accessed 20 November 2016.

secrets or intellectual property rights, especially regarding copyright of software. As with the right of access itself, the specific disclosure requirements of Recital 63 require interpretation.⁹⁸

The Recital notes that

the result of those considerations should not be a refusal to provide all information to the data subject.

Jurisprudence and legal commentary concerning the Directive's right of access (see Section 3.3.1) suggest that the balance between the data subject's right of access and data controllers' rights and freedoms will require limited disclosures of the "logic involved" in automated decision-making, primarily concerning system functionality rather than the rationale and circumstances of specific decisions.

4.2 Limitations exclusive to a right to explanation derived from safeguards against automated decision-making (Article 22(3))

In addition to the above limitations on a future right to explanation, a number of further limitations are exclusive to a right derived from Article 22(3). In the first instance, Article 22 states three conditions that, if met by an automated decision-making process, cause Article 22(1) not to apply:

- (a) is necessary for entering into, or performance of, a contract between the data subject and a data controller;
- (b) is authorised by Union or Member State law to which the controller is subject and which also lays down suitable measures to safeguard the data subject's rights and freedoms and legitimate interests; or
- (c) is based on the data subject's explicit consent.

Article 22(3) specifies that safeguards (i.e. the rights to human intervention, expression, and contest) only apply when automated decision-making meets Article 22(2)a or c. The scope of any future right to explanation enacted in relation to the safeguards specified in Article 22(3) is therefore limited to cases meeting clause (a) or (c), i.e. those necessary for entering or performing a contract,⁹⁹ or with the subject's explicit consent. It is worth noting that the

⁹⁸ Recital 63 suggests the right of access should allow a data subject to "know and obtain communication in particular with regard to the purposes for which the personal data are processed, where possible the period for which the personal data are processed, the recipients of the personal data, the logic involved in any automatic personal data processing and, at least when based on profiling, the consequences of such processing."

⁹⁹ Martini (n 28) Rn. 31-32., according to whom the necessity for the performance of a contract hinges on the agreed goals of the contract between the data controller and the data subject. However, the authors do not

safeguards in 22(3) do not apply when a decision is made in accordance with Union or Member State law (Article 22(2)b). In the latter case, explicit and specific safeguards are not described. Rather, “suitable measures to safeguard the data subject” must be laid down in the relevant Union or Member State law. This clause potentially excludes a significant range of cases of automated decision-making from the safeguards in Article 22(3) and any right to explanation derived thereof. German commentary on the GDPR has suggested that the “suitable measures” called for in Article 22(2)b do not include the disclosure of the algorithm used due to the risk posed to trade secrets; however, measures to minimise and correct discrimination and biases should be implemented.¹⁰⁰

The exemption for automated decisions related to contracts raises a further limitation. Article 22 does not define when automated decision making is “necessary” for entering or performing a contract, which runs the risk of ‘necessity’ being defined solely by the data controller. Additionally, it is important to note that Article 22(2)a envisions a situation that is different from informed consent (which is listed as a separate exception in Article 22(2)c). Legislators were contemplating a situation where data controllers make automated decisions that are necessary for a contract, but without seeking consent first. If consent would be necessary, it would have been enough to list the contractual exception under Article 22(2)c. This structure suggests that there can be situations in which the data subject does not consent to an automated decision and, apart from the general notification requirements in Articles 13-14, does not know about the decision. Data controllers are therefore allowed to decide that automated decision-making is necessary for contractual obligations, while the data subject is unable to object to it. In this case, the data subject retains the right to contest a decision reached under Article 22(3), but not to object to it being made in the first place.

4.2.1 Two interpretations of Article 22

Several other restrictions on Article 22(3) and any future right to explanation derived thereof depend upon whether Article 22 is interpreted as a *prohibition* or a *right to object*. Article 22(1) GDPR states that “the data subject shall have the right not to be subject to a decision based solely on automated processing, including profiling, which produces legal effects concerning him or her or similarly significantly affects him or her.” Due to its language (“a right not to”),

consider the vagueness of the passage and fail to address the lack of consent which is not a precondition as it is listed under lit. C.

¹⁰⁰ *ibid* Rn. 33-37.

Article 22(1) can be interpreted in two ways: as a *prohibition*¹⁰¹ or a *right to object* to automated decision-making. The two interpretations offer very different protection to the interests of data subjects and data controllers.

The first interpretation reads Article 22(1) as a *prohibition*, meaning that data controllers would be obligated not to engage in automated decision-making prior to showing that a condition in Article 22(2)a-c is met. The second interpretation reads Article 22(1) as establishing for data subjects a *right to object* to automated decision-making, which will not apply if one of the requirements in Article 22(2)a-c are met. These interpretations are differentiated by whether action is required by the data subject to restrict automated decision-making. The action in question, a formal objection by the data subject, requires both awareness of the existence of automated decision-making and a willingness to intercede, both of which require intentional effort on the part of the data subject.

Notably, this ambiguity has existed since the Data Protection Directive 1995.¹⁰² The wording of Article 15 of the Directive¹⁰³ allowed the ‘right not to be subject of an automated decision’ referred to in Paragraph 1 (“Member States shall grant *the right to every person not to be subject to a decision* which produces legal effects concerning him or significantly affects him and which is based solely on automated processing [...]” [italics added]) to be interpreted as a prohibition or a right to object.¹⁰⁴ The ambiguity led Member States to implement this right and associated protections differently.

¹⁰¹ *ibid* Rn. 1-7, 15 argues that it is a prohibition, however it is acknowledged that the placement of Article 22 in the “rights section of the data subjects” causes confusion. The argument is based on the German implementation of the 1995 Directive into national law, which was in fact phrased as a prohibition. However, the author also states that the legal status (right to object or prohibition) of Article 15 of the Directive and Article 22 GDPR is disputed: see *ibid* Rn. 14 a, 29.

¹⁰² Bird & Bird, ‘Profiling and Automated Decision-Taking’ <<http://www.twobirds.com/~media/pdfs/gdpr-pdfs/35--guide-to-the-gdpr--profiling-and-automated-decisiontaking.pdf?la=en>> accessed 10 November 2016 explains how different countries either have prohibitions or rights to object: “This could either be read as a prohibition on such processing or that the processing may take place but that individuals have a right to object to it. This ambiguity is also present in the Data Protection Directive and Member States differ in their approaches to the point.”

¹⁰³ Martini (n 28) Rn. 42-44 explains how the Germans made use of the margin of appreciation of Article 15 of the Directive and phrased it like a prohibition.

¹⁰⁴ Hildebrandt (n 71) 50 hints towards but does not make it explicit “it may be that if I don’t exercise the right, the automated decision is not a violation of the directive.” Additionally, “The draft Regulation, however, stipulates that a person may only be subjected to automated decisions under specified conditions, implying that this right is not merely a right to object.” She further explains how the same can be true for the original draft Article 20 GDPR proposal of 25th January 2012; Bygrave (n 38) 3 sees Article 15 of the Directive as sufficiently ambiguous to be interpreted as both a prohibition and a right to object.

Article 15 of the Directive has been implemented by Austria, Belgium, Germany, Finland, the Netherlands, Portugal, Sweden and Ireland as a general prohibition,¹⁰⁵ with some exceptions. The UK has a different model: data subjects are entitled to request that no automated decision is made about them, but not in the case of so called “exempt decisions.” In cases where data subjects have not lodged such a request, data controllers have to inform them about the fact that an automated decision has been made as well as about the outcome.¹⁰⁶

Due to the similarities of language and content between Article 15 of the Directive and Article 22 GDPR, the varying implementation of Article 15 as a prohibition or right to object by Member states supports the interpretation that Article 22 is ambiguous and can be read as a prohibition or right to object. Resolving the ambiguity prior to 2018 is critical, as the two interpretations have very different consequences for data subjects and data controllers.

4.2.2 Impact of the interpretation of Article 22 on a right to explanation

If Article 22 is interpreted as a prohibition, data controllers will not be allowed to make automated decisions about a data subject until one of the three requirements specified in Article 22(2) (necessary to enter or to perform a contract, authorised by law, or explicit consent) is met. Data subjects do not need to act to prevent automated decision-making, but are rather protected by default. Supervisory Authorities would shoulder the burden of enforcing Article 22 by ensuring automated decision-making is carried out legally, and could levy penalties and fines in cases of illegal decision-making. Data controllers, when making automated decisions under Article 22(2)a or c, would need to enact safeguards as specified in Article 22(3). As explained above (see Section 4), these safeguards could be voluntarily or legally extended to include a right to explanation.

If Article 22 is interpreted as a right to object, automated decision-making is restricted only to cases in which the data subject actively objects. When an objection is entered, decision-making must be shown to meet Article 22(2)a-c. For automated decisions that meet a requirement of Article 22(2), the data subject cannot object. However, when Article 22(2)a or c is met – meaning that the decision is made under contract or with consent – the safeguards specified in Article 22(3) would also apply. In these cases, the data subject would be able to request human intervention, express her views, and contest the decision and, if enacted in the

¹⁰⁵ Korff, ‘New Challenges to Data Protection Study-Working Paper No. 2’ (n 31) 84. See also p. 84 ff for further details on how other Member States implemented the Directive.

¹⁰⁶ Korff, ‘New Challenges to Data Protection Study-Country Report’ (n 43) 37 ff.

future, demand a right to explanation (see: Section 3.1). Critically, if Article 22 grants a right to object automated decision-making is legally unchallenged by default, even if it does not meet any of the requirements set out in Article 22(2), so long as the data subject does not enter an objection. This limitation increases the burden on data subjects to protect actively their interests relating to profiling and automated decision-making by monitoring and objecting to automated decision-making.

With this comparison in mind, interpreting Article 22 as a prohibition grants greater protections by default to data subject's interests, at least in the cases in which Article 22(3) would apply. As a prohibition, data controllers would be legally obliged to limit automated decision-making meeting the definition in Article 22(1) to the three cases identified in Article 22(2) (contract, Union or Member State law, consent). A prohibition would thus guarantee that all automated decision-making processes meeting the definition in Article 22(1) would be subject to a right to explanation derived from the safeguard in Article 22(3).

In contrast, a right to object would not pre-emptively restrict the types of automated decision-making undertaken by data controllers to the three cases defined in Article 22(2). Rather, these restrictions would only apply when a data subject lodged an objection against a specific instance of decision-making. At that point, processes not meeting a requirement of Article 22(2) would need to stop, and the safeguards specified in Article 22(2)b or Article 22(3) would never be triggered. Article 22 as a right to object would thus circumvent a right to explanation introduced through Article 22(3) by allowing automated decision-making not meeting a requirement in Article 22(2) to occur until the data subject enters an objection. Such 'illegal' but pre-objection decision-making would not be subject to a right to explanation derived from Article 22(3). With that said, a right to explanation derived from the right of access would not be similarly circumvented. In this case as data subject's right to explanation would apply to any decision-making meeting the definition provided in Article 22(1), even if the decision-making proved to not meet a requirement of Article 22(2) following the data subject's objection.

To summarise, if a right to explanation is enacted in the future, at best data subjects will only deserve an explanation when automated decisions have (1) *legal or similarly significant* effects, and (2) are based *solely* on automated processes. Further, if a right to explanation is derived specifically from Article 22(3), explanations will be required only if automated decision-making is (3) carried out to enter or under *contract*, or with *explicit consent*; and (4) when *overriding interests* of the data controller (e.g. trade secrets) do not exist, as specified in

Recital 63. Further restrictions on a right to explanation derived from Article 22(3) depend upon the prevailing interpretation of Article 22 as a prohibition or a right to object.

To disambiguate this limited type of right to explanation from the ‘general’ right to explanation in future discussion of the impact of the GDPR on automated processing of data, and to reflect accurately the scope of limitations on any such right, we recommend addressing instead a ‘right to be informed’ about automated decision-making. The right to be informed addresses the information provided to data subjects about automated decision-making, taking into account all of the limitations on the scope of applicability and type of information to be provided by data controllers as described in the preceding two sections. The right to be informed further accounts for precedents set in the 1995 Directive, and the impact these precedents will likely have on future interpretation of the GDPR’s notification duties (Articles 13-14), right of access (Article 15), and right not to be subject to automated decision-making (Article 22)

5 Conclusion: the future of the accountable automated decision-making

Despite claims to the contrary, a meaningful right to explanation is not legally mandated by the General Data Protection Regulation. Given the proliferation of automated decision-making and automated processing of data to support human decision-making (i.e. ‘not solely’), this is a critical gap in transparency and accountability. The GDPR appears to give strong protection against automated decision-making but, as it stands, the protections may prove ineffectual. However, transparent and accountable automated decision-making can still be achieved before the GDPR comes into force in 2018.

A right to explanation of specific decisions is not legally mandated by the safeguards contained in Article 22(3), or notification duties in Articles 13 and 14. As proven by the 1995 Directive, the right of access is ambiguous but can plausibly provide a limited right to explanation of system functionality, restricted by the interests of data controllers and future interpretations of Article 15 of the GDPR. Any future right to explanation will further be constrained by the definition of ‘automated decision-making’ in Article 22(1), which is limited to decisions based solely on automated processing with legal or similarly significant effects for the data subject. As it stands, a meaningful right of explanation to the rationale and circumstances of specific automated decisions is not forthcoming.

Analysis of prior drafts of the GDPR has revealed several tensions between the European Parliament, Commission, and Council. The placement of the right to explanation in

non-binding Recital 71 appears to be a purposeful change deliberated in trilogue. The EP generally sought stronger protections for data subjects against automated decision-making than the EC or Council. Specifically, the EP wanted to include a right to explanation in the legally binding Article 20,¹⁰⁷ whereas the Council would have preferred to have the right to explanation in non-binding Recital 58¹⁰⁸. The EC did not include such a right at all. Further, the EP wanted to protect citizens from automated decision that have legal or significant effects when *predominantly*,¹⁰⁹ and not just *solely*,¹¹⁰ based on automated processes. Human assessment would have been required.¹¹¹

As the GDPR is legally binding and intended to unify data protection law across all European Member States, the interpretation of Article 22 as a prohibition or right to object is critically important. Which interpretation will win out in the implementation of the GDPR in 2018 is not yet clear. Both are viable as suggested by the split in the implementation of Article 15 in the Data Protection Directive 1995 by Member States. Without clarification prior to enforcement, Article 22 will allow for conflicting interpretations of the rights of data subjects and controllers concerning automated decision-making across Member States. Conflicts may soon become inevitable because the two interpretations protect very different interests.

Article 22 interpreted as a prohibition offers greater protection to the interests of data subjects by prohibiting all automated decision-making not meeting a requirement of Article 22(2). In contrast, when interpreted as a right, Article 22 creates a loophole that allows data controllers to undertake automated decision-making without meeting a requirement in Article 22(2), unless the data subject objects. Once an objection is entered, decision-making must be shown to meet one of these requirements or must stop altogether. As a right, the data subject's interests in not being subjected to automated decision-making are undermined, insofar as significant effort (i.e. entering an objection) is required from the subject to protect her interests. Article 22 therefore roughly favours the interests of data subjects when interpreted as a prohibition, and the interests of data controllers when interpreted as a right.

The ambiguity of the Article 22 right not to be subject to automated decision-making, and the loopholes and weaknesses it creates, shows that the GDPR is lacking precise language and

¹⁰⁷ European Digital Rights (n 19) 140.

¹⁰⁸ *ibid* 40.

¹⁰⁹ *ibid* 140.

¹¹⁰ Both the EC and European Council only sought protections for decisions *solely based* on automated decision-making, see: *ibid* 139.

¹¹¹ *ibid* 140.

explicit and well-defined rights and safeguards, and therefore runs the risk of being toothless. Several actions may be recommended to correct some of the weaknesses identified in our analysis:

1) Add a right to explanation to legally binding Article 22(3)

If a right to explanation is intended as suggested in Recital 71, it should be explicitly added to a legally binding Article of the GDPR. Such an implementation should clarify the scope of applicability of the right with regard to the impact of Article 22 interpreted as a prohibition or right to object. Alternatively, Member States can be encouraged to implement law on top of the GDPR that requires an explanation of specific decisions. A right to explanation of specific decisions could be considered a “suitable safeguard and measure” necessitated by Article 22(3) if an explanation is necessary to contest a decision, as already prescribed in 22(3). The right to contest a decision granted in Article 22(3) may be meaningless if the data subject cannot understand how the contested decision was made. To this end, a right to explanation can be introduced requiring data controllers to provide information about the rationale of the contested decision. Clear requirements should be introduced stating the evidence to be supplied by the data controller. Evidence regarding the weighting of features, decision tree or classification structure, and general logic of the decision-making system may be sufficient. However, the risks for innovation and beneficial processing posed by a right to explanation that requires automated decision-making methods to be human interpretable should be seriously considered.¹¹²

2) Clarify the meaning of the “existence of [...] significance [...] envisaged consequences [...] [and] logic involved” in Article 15(1)h to indicate a ‘right to be informed’

The language and meaning of core concepts in Article 15 is ambiguous. This leaves open the possibility a limited right to explanation of specific decisions. However this interpretation is highly implausible for a number of reasons. As explained in Section 3.3, the semantics and history of the right to access, and the duplication of provisions in Articles 13-14, suggest that the right of access is intended merely as a counterweight to the notification duties of data controllers, and not as a means to introduce a new right (i.e. a right to explanation of specific

¹¹² Mittelstadt and others (n 6).

decisions) beyond the scope of Articles 13-14.¹¹³ Critically, interpreting Article 15 to introduce a right to explanation of specific decisions would not match the intended purpose of the right of access, which according to Recital 63 GDPR is meant to allow the data subject “to be aware of, and verify, the lawfulness of processing.” Language should be added to clarify that Article 15 is intended merely as a counterweight to Articles 13-14, and thus provides a limited ‘right to be informed’ as opposed to a right to explanation of specific decisions. The meaning of the four core concepts of Article 15(1)h should be made explicit, and their impact on the information required for data controllers to communicate to data subjects under the right to access (and, similarly, Articles 13-14 notification duties).

3) Clarify the language of Article 22(1) to indicate when decisions are based solely on automated processing

Article 22 is limited in applicability to decisions based solely on automated processing. However, it is unclear what the phrase means in practice. The potential loophole (already apparent in the German SCHUFA judgements), by which nominal involvement of a human at any stage of the automated process means the process is not solely automated, should be closed. There is still uncertainty if the usage of automated processes for the preparation of a decision constitutes “solely based” processes, if the human that takes the final decision does not wish to interfere or to adopt the decision. Clarification can be offered by returning to the phrasing “solely or predominantly based on” proposed by the EP¹¹⁴ in Article 20(5), or by providing specific examples of decision-making based solely and predominantly on automated processing of data.

4) Clarify the language of Article 22(1) to indicate what counts as a legal or significant effects of automated decision, including profiling

Article 22 only applies for automated decision-making with “*legal effects*” or “*similarly significant effects*.” The scope of these phrases should be made explicit: do they, for instance, refer only to effects identified in the Articles of the GDPR, or to some broader definition? At a minimum, the perspective to be taken in defining “*significant effects*” should be identified.

¹¹³ Paal (n 26) Rn. 19-22.

¹¹⁴ European Parliament Committee on Civil Liberties, Justice and Home Affairs (n 17).

Do effects need to be significant from the subjective perspective of the data subject or data controller, or according to some external standard?

5) Clarify the language of Article 22(2)a, “necessary for entering, or performance of a contract”

Article 22 (2) (a) names this case as an exception of either the prohibition of automated decision making or the right to object to automated decision making. Since it is likely that the necessity of such measures will be defined by the data controller and lit (a) does not require consent of the data subject (since this is a separate exception listed under lit (c), this exemption runs the risk of weakening the rights of data subjects.

6) Clarify the language of Article 22 to indicate a prohibition

Ideally, the language that allows for two plausible interpretations should be clarified prior to 2018 when the GDPR comes into force. Due to the number of loopholes and weakening of Article 22(3) safeguards introduced if Article 22 is interpreted as a right to object, as well as wide implementation of Article 15 of the 1995 Directive as a prohibition, we recommend that the language used in Article 22(2) (“*Paragraph 1 shall not apply if the decision:*”) be revised to indicate clearly and explicitly that Article 22 is intended as a prohibition against automated decision-making.

7) As a counterweight to trade secrets, introduce an external auditing mechanism for automated decision-making, or set internal auditing requirements for data controllers

Both the right of access and any future right to explanation will face significant limitations due to the sensitivity of trade secrets and intellectual property rights. As our examination of the 1995 Directive shows, explanations granted under the right of access are normally limited to system functionality and significantly limited to protect data controller interests. An ideal solution would allow for examination of automated decision-making systems, including the rationale and circumstances of specific decisions, by a trusted third party.¹¹⁵ This approach limits the risk to data controllers of exposing trade secrets, while also providing an oversight

¹¹⁵ Comparable approaches to regulating Big Data and algorithms have been suggested by: Viktor Mayer-Schönberger and Kenneth Cukier, *Big Data: A Revolution That Will Transform How We Live, Work and Think* (John Murray 2013); Andrew Tutt, ‘An FDA for Algorithms’ (Social Science Research Network 2016) SSRN Scholarly Paper ID 2747994 <<http://papers.ssrn.com/abstract=2747994>> accessed 13 April 2016.

mechanism for data subjects that can operate when explanations are infeasible or too complex for lay comprehension. The powers of Supervisory Authorities could be expanded in this regard. Alternatively, a European regulator could be created specifically for auditing algorithms, before (certifications) and/or after algorithms are being deployed.

As the ambiguities highlighted in these recommendations indicate, the GDPR can be a toothless or a powerful mechanism to protect data subjects depending on its eventual legal interpretation. Supervisory Authorities, the European Data Protection Board, national courts and their future judgments will determine the effectiveness of the new framework.¹¹⁶ Alternative legal safeguards can also be introduced to supplement the protections offered by the GDPR, for instance requirements for data controllers to use interpretable decision-making methods,¹¹⁷ or to implement auditing mechanisms and algorithms.¹¹⁸ As it stands, transparent and accountable automated decision-making is not guaranteed by the GDPR; nor is a right to explanation forthcoming. At best, data subjects will be granted a limited ‘right to be informed’. These shortcomings should be addressed before the GDPR comes into force in 2018.

¹¹⁶ Article 83(5)b invests supervisory authorities with the power to impose fines up to 4% of the total worldwide annual turnover in cases where rights of the data subjects (Article 12 to 22) have been infringed. This lever can be used to enforce compliance and to enhance data protection.

¹¹⁷ Burrell (n 12).
